

Part 1: Introduction

Joan, Eli, Gina, Isaac and Kevin made a collaborative effort to create the picture here for a math art project.

The requirements for the project were to create multiple types of triangles including the following attributes:

- Scalene
- Isosceles
- Acute
- Obtuse
- Right
- at least one pair of triangles that was Congruent.

The project also required proof or evidence that each of their triangles did in fact include all the appropriate characteristics. The project is due soon and they need help completing the proof part of their work.

To help complete the work on time, the group divided the work into three parts. They need to describe which attributes were used and

Mathematical Tasks in Classrooms Around the World, 2010-01-01 Mathematical tasks have long been recognized as crucial mediators between mathematical content and the mathematics learner For many people the mathematics classroom is defined by the type of tasks one finds there and this is appropriate Mathematical tasks are the embodiment of the curricular pretext that brings each particular set of individuals together in every mathematics classroom In other contexts individuals come together to engage in musical performances or dramatic performances The performances of the mathematics classroom are largely the performance of mathematical tasks and if we are to understand and facilitate

the learning that is the purpose of such settings then we must understand the nature of the performances that we find there. The classroom performance of a task is ultimately a unique synthesis of task, teacher, students and situation. Of particular interest are differences in the function of mathematically similar tasks when employed by different teachers in different classrooms for different instructional purposes with different students. By making comparison possible between the classroom use of mathematical tasks in different classrooms around the world, the analyses reported in this book reveal the profound differences in how each teacher utilises mathematical tasks in partnership with their students to create a distinctive form of mathematical activity. The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post lesson video stimulated interviews and by test and questionnaire data and copies of student written material. In each participating country, data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city. The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory.

Neuroimaging and Neuropsychology of Meditation States

Barbara Tomasino, Franco Fabbro, 2017. Neurophysiological and psychological modifications induced by meditation practice have been consistently addressed by neuroscience. Training meditation practice induced plasticity (Barinaga, 2003; Knight, 2004) and as a consequence several benefits for mental and physical health (Davidson, McEwen, 2012) and cognitive performance. One goal of meditation is to achieve the light of consciousness, observing with equanimity the right distance, clouds of the mind wandering. This Frontiers Research Topic brings together studies from groups of authors whose research focus on neuropsychological systems involved in meditation, demonstrating how meditation activates and can modify brain areas, cognitive mechanisms and well-being.

Constitution and Production of Mathematics in the Cyberspace

Maria Aparecida Viggiani Bicudo, 2020-04-29. This book brings together various studies that assume phenomenology to analyze how mathematics education is affected by the experience of being in the cyberspace. The authors of the chapters included in this contributed volume work with the theoretical framework developed by authors such as Edmund Husserl, Martin Heidegger and Maurice Merleau-Ponty to investigate how mathematics is produced and comprehended in a new way of being in the world with digital technologies. The aim of this book is not to explain the tools used and how one works with them in the cyberspace, aiming at better teaching and learning mathematics. Its purpose is to present philosophical investigations that contribute to the understanding of the complexity of the world in which we are being researchers and mathematics teachers. By doing so, *Constitution and Production of Mathematics in the Cyberspace: A Phenomenological Approach* will help researchers and mathematics teachers understand their role in a world in which the experience of teaching and learning

mathematics is being radically changed by new technologies and new ways of being in this world **Mathematics**
McGraw-Hill Staff,2000-08 **Information and Communications Technologies in School Mathematics** David
Tinsley,David Carlton Johnson,1998-02-28 The book aims to record the proceedings of an international conference of invited
experts and is based on four themes curriculum teachers learners and human and social issues The conference is a sequel to
two earlier ones held 10 and 20 years ago and will give an unique insight into developments in secondary schools across the
world over three decades Attaining Excellence ,1999 An In-depth Look at Geometry and Algebra Ina V. S. Mullis,1999
