Murray,2022-09-15 Long Hard Road The Lithium Ion Battery and the Electric Car provides an inside look at the birth of the lithium ion battery from its origins in academic labs around the world to its transition to its new role as the future of automotive power It chronicles the piece by piece development of the battery from its early years when it was met by indifference from industry to its later emergence in Japan where it served in camcorders laptops and cell phones The book is the first to provide a glimpse inside the Japanese corporate culture that turned the lithium ion chemistry into a commercial product It shows the intense race between two companies Asahi Chemical and Sony Corporation to develop a suitable anode It also explains for the first time why one Japanese manufacturer had to build its first preproduction cells in a converted

truck garage in Boston Massachusetts Building on that history Long Hard Road then takes readers inside the auto industry to show how lithium ion solved the problems of earlier battery chemistries and transformed the electric car into a viable competitor Starting with the Henry Ford and Thomas Edison electric car of 1914 it chronicles a long list of automotive failures then shows how a small California car converter called AC Propulsion laid the foundation for a revolution by packing its car with thousands of tiny lithium ion cells The book then takes readers inside the corporate board rooms of Detroit to show how mainstream automakers finally decided to adopt lithium ion Long Hard Road is unique in its telling of the lithium ion tale revealing that the battery chemistry was not the product of a single inventor nor the dream of just three Nobel Prize winners but rather was the culmination of dozens of scientific breakthroughs from many inventors whose work was united to create a product that ultimately changed the world **Low-Cost Solar Electric Power** Lewis M. Fraas, Mark J.

O'Neill, 2023-07-25 This book describes recent breakthroughs that promise major cost reductions in solar energy production in a clear and highly accessible manner The authors address the three key areas that have commonly resulted in criticism of solar energy in the past cost availability and variability Coverage includes cutting edge information on recently developed 40 efficient solar cells which can produce double the power of currently available commercial cells The discussion also highlights the potentially transformative emergence of opportunities for integration of solar energy storage and natural gas combined heat and power systems Solar energy production in the evening hours is also given fresh consideration via the convergence of low cost access to space and the growing number of large terrestrial solar electric power fields around the world Dr Fraas has been active in the development of Solar Cells and Solar Electric Power Systems for space and terrestrial applications since 1975 His research team at Boeing demonstrated the first GaAs GaSb tandem concentrator solar cell in 1989 with a world record energy conversion efficiency of 35 garnering awards from Boeing and NASA He has over 30 years of experience at Hughes Research Labs Chevron Research Co and the Boeing High Technology Center working with advanced semiconductor devices In a pioneering paper he proposed the InGaP GaInAs Ge triple junction solar cell predicting a cell terrestrial conversion efficiency of 40 at 300 suns concentration Having become today's predominant cell for space satellites that cell is now entering high volume production for terrestrial Concentrated Photovoltaic CPV systems Since joining JX Crystals Dr Fraas has pioneered the development of various thermophotovoltaic TPV systems based on the new GaSb infrared sensitive PV cell Dr Fraas holds degrees from Caltech B Sc Physics Harvard M A Applied Physics and USC Ph D EE
