AIM OF THE PROJECT

Using a dataset of recipes and their corresponding ingredients and their nutritional values, we aim to build a predictive model that can estimate the nutritional values of a recipe based on its ingredients. The model will be trained using a supervised learning approach, where the input features are the ingredients and the output variable is the nutritional value.

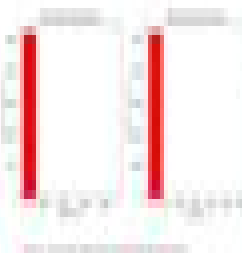

PREPROCESSING THE DATA

1. Data Cleaning

2. Data Cleaning

- The ingredients list was cleaned to remove duplicates and standardize the format.
- The nutritional values were converted to a consistent unit (e.g., grams).
- The data was split into training and testing sets.
- The features were scaled to a range of 0 to 1.
