Schmid, Gerhard Spitz, Wolfgang Lösch, 2012-12-06 This book is based on the lecture course Computer applications in Theoretical Physics which has been offered at the University of Tübingen since 1979 This course had as its original aim the preparation of students for a numerical diploma course in theoretical physics It soon became clear however that the course provides a valuable supplement to the fundamental lectures in theoretical physics Whereas teaching in this field had previously been principally characterised by the derivation of equations it is now possible to give deeper understanding by means of application examples A graphical presentation of numerical results proves to be important in emphasizing the physics Interaction with the machine is also valuable At the end of each calculation the computer should ask the question Repeat the calculation with new data yes no The student can then answer yes and input the new data e g new starting values for position and velocity in solving an equation of motion The programming of a user friendly dialogue is not really difficult but time consuming At the beginning of the course the student therefore constructs only the numerical parts of the programs The numerical parts are therefore deleted from the programs under consideration and newly programmed by the student Later on the programming of the graphical output and of the dialogue is taught Supplementary electronic material no longer available *Good Roads*, 1927 WALNECK'S CLASSIC CYCLE TRADER, JUNE 2002 Causey Enterprises, LLC,
