erased most of our history leaving us only myth and Genesis This book weaves the modern scientific evidence from Greenland ice cores Mediterranean bathymetry NASA archaeology and human genetics with the linguistic insights of the Hebrew of Genesis 1 11 into a compelling narrative that we are only the second most advanced civilization on planet Earth For now

Computational Methods for Protein Folding, Volume 120 Richard A. Friesner, 2004-03-24 Since the first attempts to model proteins on a computer began almost thirty years ago our understanding of protein structure and dynamics has dramatically increased Spectroscopic measurement techniques continue to improve in resolution and sensitivity allowing a wealth of information to be obtained with regard to the kinetics of protein folding and unfolding and complementing the detailed structural picture of the folded state Concurrently algorithms software and computational hardware have progressed to the point where both structural and kinetic problems may be studied with a fair degree of realism Despite these advances many major challenges remain in understanding protein folding at both the conceptual and practical levels Computational Methods for Protein Folding seeks to illuminate recent advances in computational modeling of protein folding in a way that will be useful to physicists chemists and chemical physicists Covering a broad spectrum of computational methods and practices culled from a variety of research fields the editors present a full range of models that together provide a thorough and current description of all aspects of protein folding A valuable resource for both students and professionals in the field the book will be of value both as a cutting edge overview of existing information and as a catalyst for inspiring new studies Computational Methods for Protein Folding is the 120th volume in the acclaimed series Advances in Chemical Physics a compilation of scholarly works dedicated to the dissemination of contemporary advances in chemical physics edited by Nobel Prize winner Ilya Prigogine

Proceedings of the Future Technologies Conference (FTC) 2023, Volume 1 Kohei Arai, 2023-11-01 This book is a collection of thoroughly well researched studies presented at the Eighth Future Technologies Conference This annual conference aims to seek submissions from the wide arena of studies like Computing Communication Machine Vision Artificial Intelligence Ambient Intelligence Security and e Learning With an impressive 490 paper submissions FTC emerged as a hybrid event of unparalleled success where visionary minds explored groundbreaking solutions to the most pressing challenges across diverse fields These groundbreaking findings open a window for vital conversation on information technologies in our community especially to foster future collaboration with one another We hope that the readers find this book interesting and inspiring and render their enthusiastic support toward it
