Robert Winston: The Story of Science Robert Winston, 2023-12-12 Delve into the stories of history's most influential scientific experiments, inventions, and life-changing discoveries that have impacted our understanding and changed the world. Let Professor Robert Winston take you on a scientific journey through human history as you learn the stories behind humanity's great inventions and discover everything that science has given us. Robert Winston's *Science That Changed the World* features fascinating facts, innovative inventions, and daring discoveries. Learn how random accidents have led to some of the greatest findings our world has ever seen and how anybody who dares to dream can be successful. From the creation of dynamite and the world's first printer to magical medicine and the discovery of soap, science really is the pioneering study that has the power to change everything. **Human Instinct** Lord Robert Winston, 2011-05-31 From caveman to modern man, few people doubt that humans are descended from the apes; fewer still consider, let alone accept, the psychological implications. But in truth, man not only looks, moves, and breathes like an ape; he also thinks like one. Sexual drive, survival, competition, aggression: all of our impulses are driven by our human instincts. They explain why a happily married man will fantasize about the pretty, slim young woman sitting across from him in the tube, and why thousands of people spend their week entirely focused on whether their team will win their next crucial match. But how well do our instincts equip us for the twenty-first century? Do they help or hinder us as we deal with large, anonymous cities, stressful careers, relationships, and the battle of the sexes? In this fascinating book, Robert Winston takes us on a journey deep into the human mind. Along the way, he takes a very personal look at the relationship between science and religion and explores those very instincts that make us human. **What Goes On in My Head?** Robert Winston, 2010-09-20 What Goes On In My Head will introduce readers to the most powerful and complicated computer network they will ever encounter: their own brain. It explains what the different parts of the brain do, how they work together, and how scientists look at the brain. What Goes On In My Head also explains how the brain changes at different stages in a person's life, how you learn to do things, what gives us our individual personalities, what memory is, and how illness affects the brain. Learn about why we have moods and emotions, why sleep is important, and much, much more. What Goes On In My Head is packed with tips and brain teasers that will test memory, perception, reasoning, and reactions. Find out what really does go on in your brain. **What Makes Me Me?** Robert M. L. Winston, 2015 Why do you have brown eyes, hairy fingers, dangly earlobes, or knuckles that crack? Are you a thrill-seeker, a people person, a computer whizz, or a social wallflower with a morbid fear of spiders? And if so, who's to blame: your parents or your genes? This book provides an age-appropriate tour of the tricky subject of biology and how genetics make up and experience makes everyone unique. Find out what genes and chromosomes are for, why some people are left-footed but right-eyed, and what it takes to become an Olympic athlete or a chess grand master. **Life Is Amazing** Robert Winston, 2012-11-01 **Superhuman** Lori Oliwenstein, Robert Winston, 2013-05-31 Accompanying the major new BBC

documentary series Superhuman explores the human body's astonishing ability to heal, renew and regenerate itself. In recording the before, during and after of radical operations on real people, it introduces us to the pioneering efforts of medical teams and alerts us to the ethical issues that new medical advances raise. Over six chapters, Superhuman addresses significant developments within six key medical areas: cancer, infection, transplantation, trauma, repair and reproduction. Acknowledging the debt modern physicians owe to yesterday, Superhuman begins by investigating the human body's innate abilities to heal itself. And as we gladly launch ourselves into an age of biotechnology, it questions whether we might now use all the information available to us to comprehend finally how our bodies work. If we can achieve that, perhaps becoming superhuman is truly within our reach.

Chapter one introduces us to the trauma surgeons who have discovered that the shock that follows trauma can prove beneficial in saving the body and the brain. Chapter two chronicles the astonishing technology now being used in medical transplants and the contentious issues these processes excite. Should technology continue to develop apace, how are doctors and patients to choose between using an artificial limb created specifically for a patient, a human limb grown from the patient's own genetic information or the alternative solutions offered by the animal kingdom? And is intervention of true benefit to the patient if it requires a lifetime of immuno-suppressing drugs? The recent successes of the Human Genome Project have dissolved the boundaries of regeneration, with made-to-order organs no longer beyond our limits. Chapter three presents the scientists responsible for engineering human tissue from materials found in the body and outlines how they might help us claim our lost powers of regeneration. Chapter four relates how we are faring in the battle against the old enemy, cancer, and tells how experts in this field are trying to regain control of the cancer cells that turn against us. Chapter five explains how we strive to combat the threats we all face living in a modern world teeming with globetrotters who share one feature: we're all potential contagion carriers. Superhuman goes on to inform of the dangers of pushing too far to eradicate infectious disease from our lives completely. Chapter six spotlights an area of considerable debate that will possibly alter the course of human evolution: fertility and genetic manipulation. Superhuman discusses both the advantages and the dangers of new technologies in this area, arguing that they have many positive applications and that often the hazards are overstated solely through fear. In an attempt never to lose sight of our humanity while inviting the superhuman in us all to work, Superhuman encourages a holistic approach to medicine and an open forum for the discussion of the future of medical science.

technologies for those in need Out of this emerges a positive view of some of the human benefits of modern medicine and the ways in which Christian theology can engage with it constructively The discussion throughout is related to the wider literature in the field

Principles of Gynaecological Surgery Stuart L. Stanton, 2012-12-06 For a long time I have felt that the present gynaecological training for registrars lacked familiarisation and understanding of the basic principles of surgery This is due to several factors Firstly the historical separation of gynaecology from general surgery which led to our development as an independent speciality and which Victor Bonney foretold to our detriment when he opposed the formation of the College of Obstetricians and Gynaecologists as a separate body from the College of Surgeons Secondly a vast improvement in medical management of many gynaecological conditions has made surgical practice dull and an unquestioning daily routine with little or no surgical instruction for many junior staff Thirdly the arrival of subspecialisation has exacerbated this as complicated surgery may be referred out by the general gynaecologist Finally the trend in further education towards writing an MD rather than taking an FRCS degree The arguments for and against were set out in an editorial in the British Journal of Obstetrics and Gynaecology 1983 later taken to task in the ensuing correspondence That editorial together with the difficulty in finding up to date articles on surgical principles in one volume were the catalysts for this book With the help of colleagues from other disciplines I have attempted to present recent advances side by side with modern day gynaecological practice
