the end of the thirteenth century is one of the most significant occurrences in the history of cartography Using geodetic and statistical analysis techniques these charts are shown to be mosaics of partial charts that are considerably more accurate than has been assumed Their accuracy exceeds medieval mapping capabilities These sub charts show a remarkably good agreement with the Mercator map projection It is demonstrated that this map projection can only have been an intentional feature of the charts construction Through geodetic analysis the author eliminates the possibility that the charts are original products of a medieval Mediterranean nautical culture which until now they have been widely believed to be Stochastic Models José González-Barrios, Ana Meda, 2003 The volume includes lecture notes and research papers by participants of the Seventh Symposium on Probability and Stochastic Processes held in Mexico City The lecture notes introduce recent advances in stochastic calculus with respect to fractional Brownian motion principles of large deviations and of minimum entropy concerning equilibrium prices in random economic systems and give a complete and thorough survey of credit risk theory The research papers cover areas such as financial markets Gaussian processes stochastic differential equations stochastic integration quantum dynamical semigroups self intersection local times etc Readers should have a basic background in probability theory stochastic integration and stochastic differential equations The book is suitable for graduate students and research mathematicians interested in probability stochastic processes and risk theory
