Introduction to Urban Science Luis M. A. Bettencourt, 2021-08-17
 A novel integrative approach to cities as complex adaptive systems applicable to issues ranging from innovation to economic prosperity to settlement patterns Human beings around the world increasingly live in urban environments In *Introduction to Urban Science* Luis Bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics He explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information Though the idea that cities are complex adaptive systems has become mainstream

until now those who study cities have lacked a comprehensive theoretical framework for understanding cities and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop Bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations It is crucial says Bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future

The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013) Michael Durant Thomas, 2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security Drawing on established securitisation frameworks Copenhagen and Paris Schools the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3 500 speeches policies and doctrinal articles since 2003 Importantly the author undertakes an examination of the intersection between the political and the military spheres probing the question of how ideology has influenced the military's uptake on the issue In this context the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper political issue and an unprecedented security threat A close examination of the key political actors their intent outlook and political mandate for broader climate action is therefore crucial to understanding the policy freedom and constraints within which military leaders operate The book consists of eight chapters divided into four parts focusing on perspectives and methodological insights empirical case studies case study comparison and concluding observations Offers a rare and systematic examination of military climate policy by a military officer from Australia Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration Develops a unique method that quantifies climate security enabling a graphical representation for quick and ready reference ideally suited to policy makers

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them

With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description
