Physical Science Paper 1 November 2014 National

Jill Atkins, Barry Atkins

Physical Science Paper 1 November 2014 National:

Climate Hazard Crises in Asian Societies and Environments Troy Sternberg, 2017-01-20 Climate hazards are the world's most widespread deadliest and costliest natural disasters. Knowledge of climate hazard dynamics is critical since the impacts of climate change, population growth, development projects, and migration affect both the impact and severity of disasters. Current global events highlight how hazards can lead to significant financial losses, increased mortality rates, and political instability. This book examines climate hazard crises in contemporary Asia, identifying how hazards from the Middle East through South and Central Asia and China have the power to reshape our globalised world. In an era of changing climates, knowledge of hazard dynamics is essential to mitigating disasters and strengthening livelihoods and societies across Asia. By integrating human exposure to climate factors and disaster episodes, the book explores the environmental forces that drive disasters and their social implications. Focusing on a range of Asian countries, landscapes, and themes, the chapters address several scales: province, national, regional, different hazards (drought, flood, temperature storms, dust), environments (desert, temperate, mountain, coastal), and issues (vulnerability, development, management, politics). To present a diverse, comprehensive evaluation of climate hazards in Asia, this book offers an understanding of the challenges climate hazards present, their critical nature, and the effort needed to mitigate climate hazards in 21st-century Asia. *Climate Hazard Crises in Asian Societies and Environments* is vital reading for those interested and engaged in Asia's development and well-being today and will be of interest to those working in Geography, Development Studies, Environmental Sciences, Sociology, and Political Science.

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human-made, and about 2 percent still question it. Despite that overwhelming majority, though, about half the population of rich countries like ours choose to believe the 2 percent. And paradoxically, this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades. This disconnect has both climate scientists and activists scratching their heads, growing anxious, and responding usually by repeating more facts to win the argument. But the more climate facts pile up, the greater the resistance to them grows, and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead. Is humanity up to the task? It is a catch-22 that starts, says psychologist and climate expert Per Espen Stoknes, from an inadequate understanding of the way most humans think, act, and live in the world around them. With dozens of examples, he shows how to retell the story of climate change and apply communication strategies more fit for the task. Publisher's description.

Handbook of the Politics of the Arctic Leif Christian Jensen, Geir Hønneland, 2015-09-25 The Arctic has again become one of the leading issues on the international foreign policy agenda in a manner unseen since the Cold War. Drawing on the perspectives of geopolitics and international law, this Handbook offers fresh insights and perspectives on the most pressing issues grouped under the headings of political ascendancy, climate, and

environmental issues resources and energy and the response and policies of affected countries **The Business of Bees**

Jill Atkins, Barry Atkins, 2017-09-08 Our bee populations are under threat Over the past 60 years they have lost much of their natural habitat and are under assault from pesticides and intensive farming We rely on bees and other insects to pollinate our fruit and vegetables and without them our environment and economy will be in crisis The Business of Bees provides the first integrated account of diminishing bee populations as well as other pollinators from an interdisciplinary perspective It explores the role of corporate responsibility and governance as they relate to this critical issue and examines what the impact will be on consumers companies stock markets and ultimately on global society if bee populations continue to decline at a dangerous rate The book considers the issue of global bee population decline from a variety of disciplines combining the perspectives of academics in accounting science and humanities with those of practitioners in the finance industry The chapters explore the impact of the rapid decline in pollinator populations on the natural world on corporations on the stock market and on accounting The Business of Bees will be essential reading for those in academia business and finance sectors and anyone invested in the future of our planet Statistical Challenges in Assessing and Fostering the Reproducibility of Scientific Results

National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Applied and Theoretical Statistics, 2016-02-29 Questions about the reproducibility of scientific research have been raised in numerous settings and have gained visibility through several high profile journal and popular press articles Quantitative issues contributing to reproducibility challenges have been considered including improper data measurement and analysis inadequate statistical expertise and incomplete data among others but there is no clear consensus on how best to approach or to minimize these problems A lack of reproducibility of scientific results has created some distrust in scientific findings among the general public scientists funding agencies and industries While studies fail for a variety of reasons many factors contribute to the lack of perfect reproducibility including insufficient training in experimental design misaligned incentives for publication and the implications for university tenure intentional manipulation poor data management and analysis and inadequate instances of statistical inference The workshop summarized in this report was designed not to address the social and experimental challenges but instead to focus on the latter issues of improper data management and analysis inadequate statistical expertise incomplete data and difficulties applying sound statistical inference to the available data Many efforts have emerged over recent years to draw attention to and improve reproducibility of scientific work This report uniquely focuses on the statistical perspective of three issues the extent of reproducibility the causes of reproducibility failures and the potential remedies for these failures Regional Risk and Security in Japan Glenn D. Hook, Ra Mason, Paul O'Shea, 2015-05-20 Japan's unusual position in the realm of international politics encapsulates a three fold juxtaposition both in and out of Asia both occupied by and a close ally of the United States and both a key trade partner and a strategic rival of China Whilst

international relations theory offers a number of ways to analyse these relations this book instead utilizes the concept of risk to provide an innovative perspective on Japan's relations with China North Korea and the US The book elucidates how risk potential harm and harm are faced disproportionately by certain groups in society This is demonstrated by providing an empirically rich analysis of the domestic implications of security relations with China North Korea and the United States through the presence of US troops in Okinawa Beginning with a theoretical discussion of risk it goes on to demonstrate how the concept of risk adds value to the study of international relations in three senses First the concept helps to break down the boundaries between the international and domestic Second the focus on risk and the everyday directs us to ask basic questions about the costs and benefits of a security policy meant to secure the national population Third what implications do these two points have for governance The question is one of governance as Japan's externally oriented security policy produces domestic insecurity shared disproportionately not equally as this volume makes clear Developing the theory of risk as a tool for understanding international relations this book will be of great interest to students and scholars of Asian politics Japanese politics international relations and security studies as well as to policy makers and practitioners working in the field

An Assessment of ARPA-E National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Evaluation of the Advanced Research Projects Agency-Energy (ARPA-E), 2017-08-28 In 2005 the National Research Council report *Rising Above the Gathering Storm* recommended a new way for the federal government to spur technological breakthroughs in the energy sector It recommended the creation of a new agency the Advanced Research Projects Agency Energy or ARPA E as an adaptation of the Defense Advanced Research Projects Agency DARPA model widely considered a successful experiment that has funded out of the box transformative research and engineering that made possible the Internet GPS and stealth aircraft This new agency was envisioned as a means of tackling the nation's energy challenges in a way that could translate basic research into technological breakthroughs while also addressing economic environmental and security issues Congress authorized ARPA E in the 2007 America COMPETES Act and requested an early assessment following 6 years of operation to examine the agency's progress toward achieving its statutory mission and goals This report documents the results of that assessment It includes both an operational assessment of the agency's funding programs and a technical assessment of its awards to the extent possible

Teaching and Digital Technologies Michael Henderson, Geoff Romeo, 2016-01-08 *Teaching and Digital Technologies Big Issues and Critical Questions* helps both pre service and in service teachers to critically question and evaluate the reasons for using digital technology in the classroom Unlike other resources that show how to use specific technologies and quickly become outdated this text empowers the reader to understand why they should or should not use digital technologies when it is appropriate or not and the implications arising from these decisions The text directly engages with policy the Australian Curriculum

pedagogy learning and wider issues of equity access generational stereotypes and professional learning The contributors to the book are notable figures from across a broad range of Australian universities giving the text a unique relevance to Australian education while retaining its universal appeal Teaching and Digital Technologies is an essential contemporary resource for early childhood primary and secondary pre service and in service teachers in both local and international education environments
