Financial Technology and Education *Water is Life* Hellum, Anne, Kameri-Mbote, Patricia, 2015-10-19 This book approached water and sanitation as an African gender and human rights issue Empirical case studies from Kenya Malawi South Africa and Zimbabwe show how coexisting international national and local regulations of water and sanitation respond to the ways in which different groups of rural and urban women gain access to water for personal domestic and livelihood purposes The authors who are lawyers sociologists political scientists and anthropologists explore how women cope in contexts where they lack secure rights and participation in water governance institutions formal and informal The research shows how women as producers of family food rely on water from multiple sources that are governed by community based norms and institutions which recognise the right to water for livelihood How these common pool water resources due to protection gaps in both international and national law are threatened by large scale development and commercialisation initiatives facilitated through national permit systems is a key concern The studies demonstrate that existing water governance structures lack mechanisms which make them accountable to poor and vulnerable water users on the ground most importantly women The findings thus underscore the need to intensify measures to hold states accountable not just in water services provision but in assuring the basic human right to clean drinking water and sanitation and also to protect water for livelihoods **Small reservoirs in Africa: a review and synthesis to strengthen future investment**

Saruchera, D., Lautze, Jonathan, 2019-11-04 **Handbook of Research on Geospatial Science and Technologies** Maphanyane, Joyce Gosata, Mapeo, Read Brown Mthanganyika, Akinola, Modupe O., 2017-08-10 The impacts of climate change are beginning to be felt throughout the world yet there is no clear explanation as to how these changes will alter our future The research being conducted within the geospatial science field is pivotal to understanding the effects the global environment is experiencing The Handbook of Research on Geospatial Science and Technologies is an essential scholarly reference source that evaluates the current methodologies and trends in geospatial science and how these insights provide society with more efficient and effective ways to manage natural resources Featuring discussions on relevant topics such as cartography geographical information systems remotely sensed data and sustainability management this publication is an informative resource for all academicians students scientists and researchers that are interested in emerging developments within geospatial science *Coal and Coalbed Gas* Romeo M. Flores, Tim A. Moore, 2024-01-24 Coal and Coalbed Gas Future Directions and Opportunities Second Edition introduces the latest in coal geology research and the engineering of gas extraction Importantly the second edition examines how over the last 10 years research has both changed focus and where it is conducted This shift essentially depicts a tale of two worlds one half Western Europe North America moving away from coal and coalbed gas research and production towards cleaner energy resources and the other half Asia Pacific region Eastern Europe South America increasing both research and usage of coal These changes are marked by a precipitous fall in coalbed gas production in North America however at the same time there has been a significant rise in coal and coalbed gas

production in Australia China and India The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia s first large scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region Since the last edition of this book global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO₂ emissions from fossil fuels in general Governmental policies have prioritized capture use and storage of CO₂ burning coal in new highly efficient low emission power plants and gas pre drainage of coal mines The Organization for Economic Cooperation and Development OECD countries and China are also introducing new research into alternative non fuel uses for coal such as carbon fibers nanocarbons graphene soil amendments and as an unconventional ore for critical elements New to this edition Each chapter is substantially changed from the 1st edition including expanded and new literature citations and reviews important new data and information new features and materials as well as re organized and re designed themes Importantly three new chapters cover global coal endowment and gas potential groundwater systems related to coalbed gas production and biogenic gas generation as well as the changing landscape of coal and coalbed gas influenced by global climate change and net zero carbon greenhouse gas emissions

FOREWORD When I reviewed the first edition of this book my initial thought was Do we need another book on coal geology and then I read it and realised Yes we need this book and my students downloaded copies as soon as it was available So now we come to 2023 and a lot has happened in the past decade For a different reason we might ask if we still need this book or even coal geoscientists and engineers as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture
