Scenario

Two students, Blake and Angela, stand on a smooth icy surface, a distance x apart and pull on opposite ends of a rope to pull themselves together. They each hold tightly onto the rope, which has negligible mass. Angela pulls on the rope with a constant force, so that she and Blake approach each other and meet. The system includes both students and the rope.

Using Representations

- PART A: The dots to the right represent the two students. Draw free-body diagrams showing and labeling the forces (not components) exerted on each student. Draw the relative lengths of all vectors to reflect the relative magnitudes of all the forces.

Data Analysis

- PART B: From the following four statements about the situation above, place a check mark next to the statement if it is completely true and provide justification. If it is partly true, correct the statement, and if it is false, cross out the statement and provide justification.

☐ A. Only Angela moves relative to the ice.

The rope has negligible mass, so no force is needed to accelerate the rope, and the forces on the two ends of the rope may be treated as a force pair. Since both students move relative to the ice, the center of mass remains at rest relative to the ice.

☒ B. The magnitude of Angela's acceleration is less than the magnitude of Blake's acceleration.

Blake experiences a smaller acceleration than Angela for the same amount of time. Smaller acceleration for equal times means that Blake has a smaller speed than Angela.

☐ C. Just before they meet, Blake's speed is less than Angela's speed.

Both students experience equal forces (Newton's third law), and since Blake has a larger mass, he experiences a smaller acceleration than Angela.
