

22. A hypodermic needle is used to give certain types of injections.

a. Based on the name of the needle, what space is the tip of the needle usually directed into?

b. What layers of the skin must the hypodermic needle pass through in order to get to this space? (In your answer, include all sublayers of the dermis or epidermis that may apply. Assume the needle is passing through thin skin.)

c. What structures do you think are the likely targets of these needles?

23. a. What layer of the epidermis represents the transition from living to dead epithelial cells?

b. Why do keratinocytes begin to die within this layer?

24. Contrast the epidermaldermal junction in thick skin with that of thin skin. Specifically note the structure of the epidermaldermal junction in thick vs. thin skin. Is there a difference in the number of dermal papillae? What function do you think such differences serve?

25. Why is it important that melanin is present in its highest concentration in the keratinocytes at or near the basal layer of cells? (Hint: Were cells that were undergoing cell division observed in this layer?)

26. a. What is the advantage of having tactile (Meissner) corpuscles located near the surface of the skin?

b. Do you think there would be more of these sensory receptors per unit area in the skin on the palm of the hand or in the skin on the back (or would they be the same)?
