Schematic Of Digital Recorders:

Automatic Digital Recording of Hanford Reactor Outlet Water Temperatures D. E. Stephens, 1955 Instrumentation has been developed which automatically senses thermocouple voltages sequentially at a rate of three per second and records temperatures in digital form as received from an analog to digital converter The temperatures are typed on a reactor face map and simultaneously coded into perforated tape data from the coded tape are then transcribed on IBM cards in a form convenient for subsequent calculations The nearly continuous display of tube power generation has given invaluable assistance in maintaining optimum pile power distributions and the coded data make possible many detailed studies of reactor dynamics control and reactivity balances *A Digital Electronic Data Recording System for Pulse-time Telemetering* Gilbert O. digital magnetic and magneto optical storage devices are widely used in audio video and data processing information technology as well as in CAD CAM computer systems These widespread uses generate a continually increasing demand for both increased information storage densities and capacities and for reduced access times Hence the materials engineering of high density storage media with a high signal to noise ratio and the associated design of sophisticated read and write heads form the basis of major technological research This research is especially complex because ideally the recorded information should be both erasable and at the same time secure and accessible over periods of many decades As a result research on these complex problems requires a multidisciplinary approach which utilizes the expertise in such widely differing fields as organic inorganic and solid state chemistry metallurgy solid state physics electrical and mechanical engineering and systems analysis Often further research specialization is necessary in each of these different disciplines For instance solid state physics and chemistry address the problems of crystallographic structure and phase diagram determination magnetism and optics but more advanced research methods such as high resolution electron microscopy and electronic band structure calculations are necessary to understand the microstructure of particulate recording media or the electronic spectra of magneto optical recording media **Theory of Magnetic Recording** H.
