

Recovery from schizophrenia: is it possible?

KEY POINTS

- Schizophrenia has a heterogeneous range of outcomes and end states, from severe cases requiring repeated or continuous hospitalization, to cases in which a single psychotic episode is followed by complete remission and recovery.
- Recovery construct is comprised of two distinct sets of phenomena: the **OBJECTIVE RECOVERY DOMAIN** and the **SUBJECTIVE RECOVERY DOMAIN**. Objective clinical recovery is defined by symptom severity and level of functioning, whereas subjective personal recovery is defined by QoL, personal confidence and hope, willingness to ask for help, reliance on others, and no domination by symptoms. Changes in subjective and objective recovery domains may influence one another.
- Functional outcome should be a priority target for therapeutic interventions in schizophrenia and **MEASURING TREATMENT RESPONSE, REMISSION AND FUNCTIONAL RECOVERY IS ESSENTIAL**.
- Several factors predict or modify the course of schizophrenia, including **DEMOGRAPHIC** characteristics (e.g., age at onset, sex), **CLINICAL** and **TREATMENT** features (e.g., negative and cognitive symptoms, substance abuse, premorbid level of functioning, duration of illness, DUP, early intervention), as well as **SOCIOECONOMIC** variables (e.g., stigma).
- Roughly half of patients with schizophrenia recovered or significantly improved over the long term, suggesting that remission or recovery is much more common than originally thought. Only an **INTEGRATED AND MULTIFACETED APPROACH INVOLVING PHARMACOTHERAPY, PSYCHOSOCIAL INTERVENTIONS, AND ATTENTION TO ENVIRONMENTAL CIRCUMSTANCES CAN IMPROVE OUTCOME AND MIGHT ACHIEVE RECOVERY** in schizophrenia patients.

Schizophrenia and Related Syndromes P. J. McKenna, 1997 The incidence of aggression and violence is of wide

concern It is therefore vital that we try to understand the mechanisms involved This book outlines definitions and theories of aggressive behavior and points out the contribution of both biological and psychological factors Aggression primarily occurs within an interpersonal exchange and is often accompanied by increased arousal and negative feelings It is most likely to occur in response to provocation but individuals differ in what they consider constitutes provocation Aggressive behavior is both multicausal and multifaceted but in order to study it we have to break it down into components and find ways in which to measure these This book describes a body of research examining the conditions under which the behavioral affective and physiological components of aggression are elicited A specific experimental technique which measures behavioral aggression in the laboratory is described The task was found to be sensitive to individual differences in aggressive disposition Aggression is not however confined to a small group of extremely hostile individuals Alcohol or substance abuse is often associated with aggression in the general population The results of some studies examining the effects of alcohol and Benzodiazepines on the feelings and behavior of healthy volunteers are reported The way in which people appraise a situation influences the way they feel and behave These drugs therefore impair the ability to process socially relevant information which in turn lowers the threshold at which aggressive behavior is likely to occur It is only by continuing to study the complex interaction between pharmacological and psychological factors that we will gain more insight into the processes underlying aggressive behavior
