The Genesis of Science James Hannam, 2011-03-22 Maybe the Dark Ages Weren t So Dark Afterall Here are some facts you probably didn t learn in school

People in the Middle Ages did not think the world was flat in fact medieval scholars could prove it wasn't The Inquisition never executed anyone because of their scientific ideas or discoveries actually the Church was the chief sponsor of scientific research and several popes were celebrated for their knowledge of the subject It was medieval scientific discoveries methods and principles that made possible western civilization's Scientific Revolution If you were taught that the Middle Ages were a time of intellectual stagnation superstition and ignorance you were taught a myth that has been utterly refuted by modern scholarship As a physicist and historian of science James Hannam shows in his brilliant new book *The Genesis of Science* How the Christian Middle Ages Launched the Scientific Revolution without the scholarship of the barbaric Middle Ages modern science simply would not exist The Middle Ages were a time of one intellectual triumph after another As Dr Hannam writes The people of medieval Europe invented spectacles the mechanical clock the windmill and the blast furnace by themselves Lenses and cameras almost all kinds of machinery and the industrial revolution itself all owe their origins to the forgotten inventors of the Middle Ages In *The Genesis of Science* you will discover Why the scientific accomplishments of the Middle Ages far surpassed those of the classical world How medieval craftsmen and scientists not only made discoveries of their own but seized upon Eastern inventions printing gunpowder and the compass and improved them beyond the dreams of their originators How Galileo's notorious trial before the Inquisition was about politics not science Why the theology of the Catholic Church far from being an impediment led directly to the development of modern science Provocative engaging and a terrific read James Hannam's *Genesis of Science* will change the way you think about our past and our future

A History of Science in World Cultures Scott L. Montgomery, Alok Kumar, 2015-06-12 To understand modern science it is essential to recognize that many of the most fundamental scientific principles are drawn from the knowledge of ancient civilizations Taking a global yet comprehensive approach to this complex topic *A History of Science in World Cultures* uses a broad range of case studies and examples to demonstrate that the scientific thought and method of the present day is deeply rooted in a pluricultural past Covering ancient Egypt Mesopotamia India Greece China Islam and the New World this volume discusses the scope of scientific and technological achievements in each civilization and how the knowledge it developed came to impact the European Renaissance Themes covered include the influence these scientific cultures had upon one another the power of writing and its technologies visions of mathematical order in the universe and how it can be represented and what elements of the distant scientific past we continue to depend upon today Topics often left unexamined in histories of science are treated in fascinating detail such as the chemistry of mummification and the Great Library in Alexandria in Egypt jewellery and urban planning of the Indus Valley hydraulic engineering and the compass in China the sustainable agriculture and dental surgery of the Mayas and algebra and optics in Islam This book shows that scientific thought has never been confined to any one era culture or geographic region Clearly presented and highly illustrated *A History of Science in World Cultures* is the perfect text for all students and others interested in the development of science throughout history

History of the Muslim World to 1405 Vernon Egger, 2016-06-23 Muslims first appeared in the early seventh century as members of a persecuted religious movement in a sun baked town in Arabia Within a century their descendants were ruling a vast territory that extended from the Atlantic Ocean to the Indus River valley in modern Pakistan This region became the arena for a new cultural experiment in which Muslim scholars and creative artists synthesized and reworked the legacy of Rome Greece Iran and India into a new civilization A History of the Muslim World to 1405 traces the development of this civilization from the career of the Prophet Muhammad to the death of the Mongol emperor Timur Lang Coverage includes the unification of the Dar al Islam the territory ruled by Muslims the fragmentation into various religious and political groups including the Shi'ite and Sunni and the series of catastrophes in the twelfth and thirteenth centuries that threatened to destroy the civilization Features Balanced coverage of the Muslim world encompassing the region from the Iberian Peninsula to South Asia Detailed accounts of all cultures including major Shi'ite groups and the Sunni community Primary sources Numerous maps and photographs featuring a special four color art insert Glossary charts and timelines [In Synchrony with the Heavens, Volume 1 Call of the Muezzin](#) David King, 2004-02-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices [The Zoomorphic Imagination in Chinese Art and Culture](#) Jerome Silbergeld, Eugene Y. Wang, 2016-10-31 China has an age old zoomorphic tradition The First Emperor was famously said to have had the heart of a tiger and a wolf The names of foreign tribes were traditionally written with characters that included animal radicals In modern times the communist government frequently referred to Nationalists as running dogs and President Xi Jinping vowing to quell corruption at all levels pledged to capture both the tigers and the flies Splendidly illustrated with works ranging from Bronze Age vessels to twentieth century conceptual pieces this volume is a wide ranging look at zoomorphic and anthropomorphic imagery in Chinese art The contributors leading scholars in Chinese art history and related fields consider depictions of animals not as simple one for one symbolic equivalents they pursue in depth in complexity and in multiple dimensions the ways that Chinese have used animals from earliest times to the present day to represent and rhetorically stage complex ideas about the world around them examining what this means about China past and present In each chapter a specific example or theme based on real or mythic creatures is derived from religious political

or other sources providing the detailed and learned examination needed to understand the means by which such imagery was embedded in Chinese cultural life Bronze Age taotie motifs calendrical animals zoomorphic modes in Tantric Buddhist art Song dragons and their painters animal rebuses Heaven sent auspicious horses and foreign sent tribute giraffes the fantastic specimens depicted in the Qing Manual of Sea Oddities the weirdly indeterminate creatures found in the contemporary art of Huang Yong Ping these and other notable examples reveal Chinese attitudes over time toward the animal realm explore Chinese psychology and patterns of imagination and explain some of the critical means and motives of Chinese visual culture The Zoomorphic Imagination in Chinese Art and Culture will find a ready audience among East Asian art and visual culture specialists and those with an interest in literary or visual rhetoric Contributors Sarah Allan Qianshen Bai Susan Bush Daniel Greenberg Carmelita Carma Hinton Judy Chungwa Ho Kristina Kleutghen Kathlyn Liscomb Jennifer Purtle Jerome Silbergeld Henrik S rensen and Eugene Y Wang

Culture and Conquest in Mongol Eurasia Thomas T. Allsen, 2004-03-25 In the thirteenth century the Mongols created a vast transcontinental empire that functioned as a cultural clearing house for the Old World Under Mongol auspices various commodities ideologies and technologies were disseminated across Eurasia The focus of this path breaking study is the extensive exchanges between Iran and China The Mongol rulers of these two ancient civilizations shared the cultural resources of their realms with one another The result was a lively traffic in specialist personnel and scholarly literature between East and West These exchanges ranged from cartography to printing from agriculture to astronomy The book concludes by asking why the Mongols made such heavy use of sedentary scholars and specialists in the elaboration of their court culture and why they initiated so many exchanges across Eurasia This is a work of great erudition which crosses new scholarly boundaries in its analysis of communication and culture in the Mongol empire
