- Atomic Theory of Matter
 - Every element consists of tiny particles called atoms
 - All atoms of a particular element have the same properties
 - Different elements have different properties because their atoms are different
 - Atoms of different elements can combine in specific ways to form compounds
 - Chemical processes are the result of the rearrangement, combination, or separation of atoms
- Abbreviation given to each element –chemical symbol—Know the bold print chemical symbols
- Parts of an atom
 - Nucleus—dense central core composed of protons and neutrons
 - Electrons surround the nucleus
 - Protons and neutrons are made up of small particles called quarks
 - Protons have positive charge and electrons have a negative charge
- Isotopes—atoms that are of the same element but have different number of neutrons
- Electron shells—regions around the nucleus that represent the energy level of electrons
- Ions—atoms with a charge
 - Cation—atom with positive charge
 - Anion—atom with negative charge

Physical Science Chapter 6 Vocabulary:

Consciousness and Fundamental Reality Philip Goff, 2017-07-21 In *Consciousness and Fundamental Reality* Philip Goff argues that physicalist views cannot account for the evident reality of conscious experience and hence that physicalism cannot be true. He argues that there are big problems with the most well known arguments against physicalism and proposes significant modifications. He then explores and defends a theory of fundamental reality known as Russellian monism. Russell argued that physics for all its virtues gives us a radically incomplete picture of the world and tells us only about the extrinsic mathematical features of material entities and not how they are in and of themselves. Following Russell, Goff's version of Russellian monism argues that it is this hidden intrinsic nature of matter that explains human and animal consciousness.
