Reed, Yaacov Petscher, 2011 The purpose of this study was to improve the utility of retell protocols by more clearly identifying the testing conditions under which students demonstrate better performance The research questions concern whether the wording of the initial prompt the inclusion of a follow up prompt or the opportunity to silently re read the passage is related to retell performance Because retells were scored quantitatively by the percent of pre determined idea units included it was hypothesized a prompt asking students to tell everything they remember would be associated with better scores than a prompt asking students to tell what a passage is mostly about Furthermore it was hypothesized that students of various ability levels would have improved retells if provided an opportunity to re read a passage silently prior to retelling it rather than delivering their responses immediately following a 1 minute timed oral reading fluency ORF component The original sample included 589 sixth seventh and eighth graders of all ability levels who returned parent permission forms to participate in the study When scored quantitatively an initial prompt that asks students to tell everything they remember results in better responses than telling what the passage was mostly about Moreover encouraging students to continue retelling by asking if they remembered anything else also significantly increases students scores Offering addition time to reread a passage silently does not significantly improve retell as compared to retelling immediately after an ORF assessment The results were similar when considering the number of words students included in their retells The length of utterance was significantly longer when asked to tell everything and was longer still when encouraged to keep retelling It seems students considered the initial prompt a literal indicator of what they were to do either give a succinct gist of what the passage was mostly about or give as much information as possible Yet even with the tell everything prompt students did not provide all the information they actually recalled unless they were repeatedly prompted to continue retelling These are important results given the great amount of variance in the prompts used across retell instruments Reed manuscript under review Reed Reed Vaughn Petscher in press Therefore retell has the potential to better inform reading instruction if administered under

conditions that preserve instructional time and optimize student performance Retell Scoring Guide is appended Contains 5 tables
