Virtual Teacher Boris Aberšek,Janez Bregant,2014-10-17 Today in the age of technology contemporary researchers from the fields of philosophy cognitive science neurobiology and artificial intelligence ask many questions about the nature of the mind and body originating in ancient Greek philosophy Among those are also questions about the relationship between humans and machines and the implications this carries for solving traditional problems within philosophy In this book the term machine is taken to refer to every system which in the contemporary world tries to make a task easier for humans or even tries to replace the human altogether such as a humanoid robot able to perform different physical activities as well as various mental

activities like decision making and problem solving The volume makes the first step towards a connection between certain different disciplines involved in education The gap between neurochemistry cognitive science neurobiology and other rapidly developing disciplines on one side and education as part of social sciences on the other currently appears to be great and even unbridgeable except by analogy metonymy and metaphor From the experiences of recent years it seems clear that the existing educational system as a whole is perceived as an ailing system that fails to meet the needs of a major portion of the society it serves This book brings to attention a form of learning that transcends logic and rhetorical appeal It defines appropriate architecture on the basis of cognitive science and methods of artificial intelligence taking into account that a school system is a dynamical system which follows the dynamical systems theory The volume shows how to build an intelligent tutoring system and an intelligent teaching learning system upon it Through the use of intelligent tutoring systems students are placed in an active role as opposed to the passive role that they more or less have today

Trade Secrets and Market Dominance Peicheng Wu, 2025-09-30 This book explores the circumstances where the use of trade secrets may constitute the abuse of market dominance under competition law Trade secrets have been valuable intangible assets for companies in the modern market While it is imperative to protect trade secrets noteworthy is that the exploitation of trade secrets may lead to anti competitive concerns and may require antitrust intervention By examining comparative experience from both sides of the Atlantic this book provides specific suggestions for China s competition authorities to handle anti monopoly cases concerning trade secrets This book is of interest for readers in the field of competition law and intellectual property law particularly for those who are researching on the interaction between antitrust and intellectual property law
