 work With each chapter written in the first person the authors have three key objectives 1 to document and provide an
 accessible account of how they have framed and addressed a range of the key problems that are posed by the human
 dimensions of global change 2 to illustrate how investigators and graduate students have worked together productively
 across different disciplines and locations on common problems and 3 to encourage funders and scholars across the world to
 undertake similar large scale interdisciplinary research activities to meet the world s largest challenges Exploring topics
 such as energy efficiency public health and climate adaptation and with a final chapter dedicated to lessons learned this
 innovative volume will be of great interest to students and scholars of climate change energy transitions and environmental
 studies more broadly
