Advanced Modelling Techniques in Structural Design Feng Fu, 2015-03-26 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings earthquake progressive collapse fire blast and vibration analysis non linear geometric analysis and buckling analysis Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa Willis Towers Taipei 101 the Gherkin Millennium Bridge Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems **Industrial Robot Handbook** Richard K. Miller, 2013-11-21 These are exciting times for manufacturing engineers It has been said that American industry will undergo greater changes during the 1980 and 1990 decades than it did during the entire eight preceding decades of this century The industrial robot has become the symbol of this progress in computer integrated manufacturing This book is for engineers and managers in manufacturing industries who are involved in implementing robotics in their operations With tens of thousands of industrial robots already in use in the United States there are plenty of role models for proposed applications to be patterned after This book provides an overview of robot applications and presents case histories that might suggest applications to engineers and managers for implementation in their own facilities The application of industrial robots were well developed in the late 1970s and early 1980s While the reader may note some of the examples discussed in this handbook incorporate older robot models it is the application that is of interest As Joseph Engelberger the founding father of robotics has pointed out industrial robots in 1988 are doing pretty much the same kind of work as they did in 1980 **Advances in Robot Design and Intelligent Control** Theodor Borangiu, 2015-08-07 This volume includes the Proceedings of the 24th International Conference on Robotics in Alpe Adria Danube Region RAAD 2015 which was held in Bucharest Romania on May 27 29 2015 The Conference brought together academic and industry researchers in robotics from the 11 countries affiliated to the Alpe Adria Danube space Austria Croatia Czech Republic Germany Greece Hungary Italy Romania Serbia Slovakia and Slovenia and their worldwide partners According to its tradition RAAD 2015 covered all important areas of research development and innovation in robotics including new trends such as bio inspired and cognitive robots visual servoing of robot motion human robot interaction and personal robots for ambient assisted living The accepted papers have been grouped in nine sessions Robot integration in industrial applications Grasping analysis dexterous grippers and component

The book presents the research findings of scientists working at universities in the Far Eastern Siberian and Ural Federal Districts of Russia and of Serbia which are unique regions notable for sustainably operating complex transport infrastructures in severe climatic and geographic environments. It also offers practical insights into transportation operation under such conditions. The book discusses the experiences of colleagues from Slovenia, Ukraine and Latvia in the development of transport infrastructure and construction of transport facilities and features and includes the results of a wide range of studies such as managing multimodal transportation, improving the efficiency of locomotives, electric locomotives, traction substations, electrical substations, relay protection and automation devices and power factor correction units. It addresses topics like renewable energy sources, problems of the mathematical and simulation modelling of electromagnetic processes of electrical power objects and systems, aspects of cost reduction for fuel and power resources, theoretical aspects of energy management, development of transport infrastructure, modern organizational and technological solutions in construction, new approaches in the field of management analysis and monitoring in transport sector. Comprising 142 high quality articles covering a wide range of topics, these proceedings are of interest to anyone engaged in transport engineering, electric power systems, energy management, construction and operation of transport infrastructure, buildings and facilities.

Active Control of Bidirectional Structural Vibration Wen Yu, Satyam Paul, 2020-06-05 This book focuses on safeguarding civil structures and residents from natural hazards such as earthquakes through the use of active control. It proposes novel proportional derivative (PD) and proportional integral derivative (PID) controllers as well as discrete time sliding mode controllers (DSMCs) for the vibration control of structures involving nonlinearities. Fuzzy logic techniques are used to compensate for nonlinearities. The first part of the book addresses modelling and feedback control in inelastic structures and presents a design for PD/PID controllers. In the second part, classical PD/PID and type 2 fuzzy control techniques are combined to compensate for uncertainties in the structures of buildings. The methodology for tuning the gains of PD/PID is obtained using Lyapunov stability theory and the system's stability is verified. Lastly, the book puts forward a DSMC design that does not require system parameters, allowing it to be more flexibly applied. All program codes used in the paper are presented in a MATLAB/Simulink environment. Given its scope, the book will be of interest to mechanical and civil engineers and to advanced undergraduate and graduate engineering students in the areas of structural engineering, structural vibration
