Science Of Interstellar:

The Science of Interstellar Kip Thorne, 2014-11-07 A journey through the otherworldly science behind Christopher Nolan's award-winning film *Interstellar* from executive producer and Nobel Prize-winning physicist Kip Thorne. *Interstellar* from acclaimed filmmaker Christopher Nolan takes us on a fantastic voyage far beyond our solar system. Yet in *The Science of Interstellar*, Kip Thorne, the Nobel prize-winning physicist who assisted Nolan on the scientific aspects of *Interstellar*, shows us that the movie's jaw-dropping events and stunning never-before-attempted visuals are grounded in real science. Thorne shares his experiences working as the science adviser on the film and then moves on to the science itself. In chapters on wormholes, black holes, interstellar travel, and much more, Thorne's scientific insights, many of them triggered during the actual scripting and shooting of *Interstellar*, describe the physical laws that govern our universe and the truly astounding phenomena that those laws make possible. *Interstellar* and all related characters and elements are trademarks of and Warner Bros Entertainment Inc. s14

Making Starships and Stargates James F. Woodward, 2012-12-15 To create the exotic materials and technologies needed to make stargates and warp drives is the holy grail of advanced propulsion. A less ambitious but nonetheless revolutionary goal is finding a way to accelerate a spaceship without having to lug along a gargantuan reservoir of fuel that you blow out a tailpipe. Tethers and solar sails are conventional realizations of the basic idea. There may now be a way to achieve these lofty objectives. *Making Starships and Stargates* will have three parts. The first will deal with information about the theories of relativity needed to understand the predictions of the effects that make possible the propulsion techniques and an explanation of those techniques. The second will deal with experimental investigations into the feasibility of the predicted effects: that is, do the effects exist and can they be applied to propulsion? The third part of the book, the most speculative, will examine the question: what physics is needed if we are to make wormholes and warp drives? Is such physics plausible? And how might we go about actually building such devices? This book pulls all of that material together from various sources, updates and revises it, and presents it in a coherent form so that those interested will be able to find everything of relevance all in one place.

The Outer Heliosphere: The Next Frontiers E. Marsch, H.-J. Fahr, K. Scherer, 2001-09-19 The eleventh COSPAR colloquium The Outer Heliosphere The Next Frontiers was held in Potsdam Germany from 24-28 July 2000 and is the second dedicated to this subject after the first one held in Warsaw Poland in 1989 Roughly a century has passed after the first ideas by Oliver Lodge George Francis Fitzgerald and Kristan Birkeland about particle clouds emanating from the Sun and interacting with the Earth environment Only a few decades after the formulation of the concepts of a continuous solar corpuscular radiation by Ludwig Bierman and a solar wind by Eugene Parker heliospheric physics has evolved into an important branch of astrophysical research Numerous spacecraft missions have increased the knowledge about the heliosphere tremendously Now at the beginning of a new millenium it seems possible by newly developed propulsion technologies to send a spacecraft beyond the boundaries of the heliosphere Such an Interstellar Probe will start the in situ exploration of interstellar space and thus can be considered as the first true astrophysical spacecraft The year 2000 appeared to be a highly welcome occasion to review the achievements since the last COSPAR Colloquia 11 years ago to summarize the present developments and to give new impulse for future activities in heliospheric research
