Group 1: Earth-Sun Interactions

Question 1: How is Earth's geomagnetic field generated? How does it vary? What happens when it is disrupted? How does it affect Earth's atmosphere and space environment? How does it affect Earth's climate?

Answer 1: The Earth's geomagnetic field is generated by the motion of molten iron in the outer core. The field is not uniform, but it is generally aligned with the Earth's axis. The field is disrupted by solar wind and solar flares, which can cause geomagnetic storms. These storms can affect Earth's atmosphere and space environment, and they can also affect Earth's climate.
