Plant Adaptation And Phytoremediation:

Plant Adaptation and Phytoremediation M. Ashraf, M. Ozturk, M. S. A. Ahmad, 2010-08-17 The problems engendered by the conflicting imperatives of development and ecology show no sign of ending and every day more locations are added to the list of landscapes poisoned by human activity This vital book featuring an international set of authors is a key reference for researchers and environmental managers as well as anyone involved in the mining industry or landscape remediation The comprehensive coverage of current approaches to phytoremediation begins by examining the problem It looks at natural and human induced toxins and their effects on natural vegetation as well as agricultural crops Particular attention is paid to the two largest challenges to remediation heavy metals and the salt stress that is impeding agricultural productivity worldwide The text moves on to focus on the efficacy of different plant species in removing toxic pollutants from the environment Along with analysis of a number of case studies this section includes new and updated information on the mechanism of toxin tolerance in plants *Plants, Pollutants and Remediation* Münir Öztürk, Muhammad Ashraf, Ahmet Aksoy, M. S. A. Ahmad, Khalid Rehman Hakeem, 2016-01-12

In the era of current industrial and civil development everyone is expressing a deep concern about the problem of environmental pollution The majority of the global community has a vested interest in supporting and sustaining any move for the protection of environment In the greater part of the last century it was the fast pace of industrialization galloping demand for energy and reckless exploitation of natural resources that were mainly responsible for creating the problem of environmental pollution In the current scenario high illiteracy rates of the developing nations leads to increasing environmental pollution When it comes to the hazards of environmental pollution there is only a very thin dividing line between different countries One pollutes and the other suffers there are no eventual winners without significant changes globally Pollution is posing serious threats to all kinds of diversities on earth in particular plants The plant world is of vital importance for our planet It is a worldwide priority aimed at better meeting the needs for food livelihoods and nature To meet the food demand of fast growing population global food production will have to be doubled The sustainability of food production depends on the sustainability of plant resources and using tolerant varieties to augment food production This volume therefore covers discussions on the recent developments in this connection and the emerging role of plants as indicators remediation and such related issues as biodiversity conservation and the effects of on edible plants It reviews issues concerning the future of plant life Taking cognizance of this several experts from different parts of the globe have contributed from their experience and knowledge to the critical issues of Environmental Pollution and the Role of Plants in this connection **Soil Remediation and Plants** Khalid Hakeem, Muhammad Sabir, Munir Ozturk, Ahmet Ruhi Mermut, 2014-08-29 The soil is being contaminated continuously by a large number of pollutants Among them heavy metals are an exclusive group of toxicants because they are stable and difficult to disseminate into non toxic forms The ever increasing concentrations of such pollutants in the soil are considered serious threats toward everyone's health and the

environment Many techniques are used to clean eliminate obliterate or sequester these hazardous pollutants from the soil However these techniques can be costly labor intensive and often disquieting Phytoremediation is a simple cost effective environmental friendly and fast emerging new technology for eliminating toxic heavy metals and other related soil pollutants Soil Remediation and Plants provides a common platform for biologists agricultural engineers environmental scientists and chemists working with a common aim of finding sustainable solutions to various environmental issues The book provides an overview of ecosystem approaches and phytotechnologies and their cumulative significance in relation to solving various environmental problems Identifies the molecular mechanisms through which plants are able to remediate pollutants from the soil Examines the challenges and possibilities towards the various phytoremediation candidates Includes the latest research and ongoing progress in phytoremediation
