Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic and resistance training. The CON group did not exercise. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results suggest that a 12-week training program can improve cardiovascular fitness and increase energy expenditure in sedentary, middle-aged women.
