Smart Biolabs of the Future Sascha Beutel, Felix Lenk, 2022-09-06 This book reviews the advances in data gathering and processing in the biotech laboratory environment and it sheds new lights on the various aspects that are necessary for the implementation of intelligent laboratory architecture and infrastructure Smart technologies are increasingly dominating our everyday lives and have become an indispensable part of the industrial environment The laboratory environment which has long been rather conservative has also set out to adapt smart technologies with regards to Industry 4.0 and the Internet of Things IoT for the laboratory Due to the heterogeneity of the existing infrastructure and the often complex work processes standardization is slow e.g. to implement device interfaces or standardized driver protocols which are urgently needed to generate standardized data streams that would be immanent for post processing of data Divided into 9 chapters this book offers an authoritative overview of the diverse aspects in the generation and recording of uniform data sets in the laboratory and in the processing of the data and enabling seamless processing towards machine learning and artificial intelligence In the first part of the book readers will find more about high throughput systems automation robotics and the evolution of technology in the laboratory The second part of the book is devoted to standardization in lab automation in which readers will learn more about some regulatory aspects the SiLA2 standards the OPC LADS Laboratory and Analytical Device Standard and FAIR Data infrastructure

Advances in Microfluidics Technology for Diagnostics and Detection David Kinahan, Dario Mager, Elizaveta Vereshchagina, Celina Miyazaki, 2021-09-06 Microfluidics and lab on a chip have in recent years come to the forefront in diagnostics and detection At point of care in the emergency room and at the hospital bed or GP clinic lab on a chip offers the potential to rapidly detect time critical and life threatening diseases such as sepsis and bacterial meningitis Furthermore portable and user friendly diagnostic platforms can enable disease diagnostics and detection in resource poor settings where centralised laboratory facilities may not be available At point of use microfluidics and lab on chip can be applied in the field to rapidly identify plant pathogens thus reducing the need for damaging broad spectrum pesticides while also reducing food losses Microfluidics can also be applied to the continuous monitoring of water quality and can support policy makers and protection agencies in protecting the environment Perhaps most excitingly microfluidics also offers the potential to enable entirely new diagnostic tests that cannot be implemented using conventional laboratory tools Examples of microfluidics at the frontier of new

medical diagnostic tests include early detection of cancers through circulating tumour cells CTCs and highly sensitive genetic tests using droplet based digital PCR This Special Issue on Advances in Microfluidics Technology for Diagnostics and Detection aims to gather outstanding research and to carry out comprehensive coverage of all aspects related to microfluidics in diagnostics and detection
