Agile Risk Management Alan Moran, 2014-03-18 This work is the definitive guide for IT managers and agile practitioners It elucidates the principles of agile risk management and how these relate to individual projects Explained in clear and concise terms this synthesis of project risk management and agile techniques is illustrated using the major methodologies such as XP Scrum and DSDM Although the agile community frequently cites risk management research suggests that risk is often narrowly defined and at best implicitly treated which in turn leads to an inability to make informed decisions concerning risk and reward and a poor understanding of when to engage in risk related activities Moreover the absence of reference to enterprise risk management means that project managers are unable to clearly articulate scope or tailor their projects in line with the wider expectations of the organisation Yet the agile approach with its rich toolset of techniques is very well equipped to effectively and efficiently deal with the risks that arise in projects Alan Moran addresses the above issues by proposing an agile risk management process derived from classical risk management but adapted to the circumstances of agile projects Though his main focus is on the software development process much of what he describes could be applied to other types of IT projects as well This book is intended for anyone who is serious about balancing risk and reward in the pursuit of value for their stakeholders and in particular for those directly involved in agile software development who share a concern for how risk should be managed Whilst a thorough background in risk management is not presumed a basic level of familiarity with or exposure to agility is helpful *Integrated Formal Methods* Judi M.T.

Romijn, Graeme P. Smith, Jaco C. van de Pol, 2005-10-27 This book constitutes the refereed proceedings of the 5th International Conference on Integrated Formal Methods IFM 2005 held in Eindhoven The Netherlands in November December 2005 The 19 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 40 submissions The papers are organized in topical sections on components state event based verification system development applications of B tool support non software domains semantics as well as UML and statecharts **Scaling**
