INTER-ENG 2020 Liviu Moldovan, Adrian Gligor, 2021-05-31 These proceedings contain research papers that were accepted for presentation at the 14th International Conference Inter Eng 2020 Interdisciplinarity in Engineering which was held on 8-9 October 2020 in Târgu Mureș Romania. It is a leading international professional and scientific forum for engineers and scientists to present research works, contributions and recent developments as well as current practices in engineering which is falling into a tradition of important scientific events occurring at Faculty of Engineering and Information Technology in the George Emil Palade University of Medicine, Pharmacy, Science and Technology of Târgu Mureș Romania. The Inter Eng conference started from the observation that in the 21st century the era of high technology without new approaches in research we cannot speak of a harmonious society. The theme of the conference proposing a new approach related to Industry 4.0 was the development of a new generation of smart factories based on the manufacturing and assembly process digitalization related to advanced manufacturing technology, lean manufacturing, sustainable manufacturing, additive manufacturing and manufacturing tools and equipment. The conference slogan was Europe's future is digital, a broad vision of the Industry 4.0 concept beyond direct manufacturing in the company. Advancement in Emerging Technologies and Engineering Applications Chun Lin Saw, Tze Keong Woo, Salvinder Singh, a/l Karam Singh, Didi Asmara Bin Salim, 2019-10-21 This volume contains selected and reviewed manuscripts from the 2nd Regional Conference on Mechanical and Marine Engineering ReMME 2018 Sustainable Through Engineering which was held from November 7 to 9, 2018 at the Ipoh Perak Malaysia. This conference was organized by the Center of Refrigeration and Air Conditioning CARE and Center of Marine Engineering CTME Politeknik Ungku Omar, Jalan Raja Musa Mahadi 31400 Ipoh Perak. It discusses the expertise, skills and techniques needed for the development of energy and renewable energy systems, new materials and biomaterials and marine technology. It focuses on finite element analysis, computational fluids dynamics programming and mathematical methods that are used for engineering simulations and present many state-of-the-art applications. For example, modern joining technologies can be used to fabricate new compound or composite materials even those formed from dissimilar component materials. These composite materials are often exposed to harsh environments, must deliver specific characteristics and are primarily used in automotive and marine technologies, i.e. ships, amphibious vehicles, docks, offshore structures and even robots. An energy-efficient method such as cogeneration, thermal energy storage and solar desalination also being highlighted as sustainable engineering in this book chapter.
