EXAMPLE

Write an equation of a hyperbola with vertices $(-1, 2)$ and $(3, 2)$, and foci $(-3, 2)$ and $(5, 2)$.

Draw a sketch. The center is the midpoint of the line joining the vertices. Its coordinates are $(1, 2)$.

The distance between the vertices is $2a$, and the distance between the foci is $2c$. $2a = 4$, so $a = 2$; $2c = 8$, so $c = 4$.

Find b^2 using the Pythagorean Theorem.

$$c^2 = a^2 + b^2$$

$$16 = 4 + b^2$$

$$b^2 = 12$$

to Descartes Roshdi Rashed, 2014-08-21 This book follows the development of classical mathematics and the relation between
work done in the Arab and Islamic worlds and that undertaken by the likes of Descartes and Fermat Early modern
mathematics is a term widely used to refer to the mathematics which developed in the West during the sixteenth and
seventeenth century For many historians and philosophers this is the watershed which marks a radical departure from
classical mathematics to more modern mathematics heralding the arrival of algebra geometrical algebra and the
mathematics of the continuous In this book Roshdi Rashed demonstrates that early modern mathematics is actually far more
composite than previously assumed with each branch having different traceable origins which span the millennium Going
back to the beginning of these parts the aim of this book is to identify the concepts and practices of key figures in their
development thereby presenting a fuller reality of these mathematics This book will be of interest to students and scholars
specialising in Islamic science and mathematics as well as to those with an interest in the more general history of science and
mathematics and the transmission of ideas and culture **Translation** Titus Lucretius Carus, 1891 Translations [from
