

PowerCommand® Paralleling System Digital MasterControl™

Our energy working for you.™

Description

The PowerCommand Digital MasterControl™ is a system-level controller designed to interface directly with Cummins Power Generation PowerCommand paralleling generator sets. The DMC is a complete distributed logic control system for complex and demanding on-site power systems where reliability, performance, and flexibility are paramount.

In PowerCommand paralleling systems, the generator set-mounted controls provide all the paralleling functions including genset control, generator set protection, synchronizing, first-to-bus logic, load sharing (for isolated bus operation with other generator sets) and load governing (for grid-interconnected operation). The DMC provides system-level functions, including load add and shed sequencing, load demand, and system operator interface. The DMC also provides power transfer control functions in some applications.

The DMC can either be installed separately at a convenient location or integrated into the system power sections when required. It is suitable for both low and medium voltage applications.

Features

The Digital MasterControl offers a wide range of standard control and digital display features so custom control configurations can be achieved with minimal design work.

Major control features include:

- Full function master control for any paralleling system. System master control provides for use of the on-site power system for both emergency/stand-by (isolated bus) operation and operation in parallel with a utility (mains) service for applications ranging from short-term soft power transfer to continuous paralleling situations.
- High resolution color touchscreen graphically displays comprehensive system and generator data, AC metering, trending, and other information.
- Automatic load adding and shedding. System includes load sequencing to automatically add load and remove load as system capacity changes due to generator set availability and changes in system load level.
- PowerCommand Network links the Digital MasterControl with generator sets, transfer switches (when used) and remote monitoring equipment (when used). The DMC provides detailed operational data on all components in the system and allows direct operator control.
- Remote user interface (optional). The DMC is configured to allow use of a remote PC-based operator panel running the same HMI software as the master control panel.
- Warranty. PowerCommand systems are supported by a worldwide network of independent distributors who provide local parts, service and warranty support.
