Electric Power : Physical Science

- Recall that the rate energy is converted from one form to another is *power*.
- The unit of power is the watt (or kilowatt). So in units form.

Electric power (watts)= current (amperes) x voltage (volts).

where 1 watt = 1 ampere x volts.

1. What is the power when a voltage of 120 V drives a 2-A current through a device?

2. What is the current when a 60-W lamp is connected to 120 V?

3. How much current does a 100-W lamp draw when connected to 120 V?

4. If part of an electric circuit dissipates energy at 6 W when it draws a current of 3 A, what voltage is impressed across it?

5. Explain the difference between a kilowatt and a kilowatt-hour.

6. One deterrent to burglary is to leave your front porch light on all the time. If your fixture contains a 60-W bulb at 120 V and your local power utility sells energy at 8 cents per kilowatt-hour, how much will it cost to leave the bulb on for the whole month? Show your work on the other side of this page.
