RealWorldDigitalPhotography **No specimen left behind: mass digitization of natural history collections** Vincent Smith, 2012-07-20 Centuries of exploration and discovery have documented the diversity of life on Earth Records of this biodiversity are for the most part distributed across varied and distinct natural history collections worldwide This makes the task of extracting and mobilising the information within these collections an immense challenge In this special issue of

ZooKeys 18 papers by 81 authors examine progress and prospects for mass digitising entire natural history collections. These papers provide a snapshot of activity in what is a fast moving field that is seeing ever increasing degrees of collaboration across disciplines and between collection based institutions. Examples of research covered by these articles include a description to efforts digitise 30 million plant invertebrate and vertebrate specimens at NCB Naturalis in the Netherlands, new scanning and telemicroscopy solutions to digitise the millions of pinned insect specimens held in the Australian National Insect Collection and its European and North American counterparts, citizen science projects being used to crowdsource the transcription of thousands of specimen labels and field notebooks and new data portals providing central access to millions of biological specimens across Europe. Many of these projects deal with the unique challenges associated with major collections that have built up over several centuries with different communities of practices and different user communities. Despite many differences, standards for collection acquisition, preservation and documentation are broadly consistent, meaning that there is sufficient common ground to bring together the enormous amounts of data that are being exposed through mass digitisation efforts. These data will become the new frontier for natural history collection management and research in the next decade.

[Data Matching](#) Peter Christen, 2012-07-04. Data matching, also known as record or data linkage, entity resolution, object identification or field matching, is the task of identifying matching and merging records that correspond to the same entities from several databases or even within one database. Based on research in various domains including applied statistics, health informatics, data mining, machine learning, artificial intelligence, database management and digital libraries, significant advances have been achieved over the last decade in all aspects of the data matching process, especially on how to improve the accuracy of data matching and its scalability to large databases. Peter Christen's book is divided into three parts. Part I: Overview introduces the subject by presenting several sample applications and their special challenges as well as a general overview of a generic data matching process. Part II: Steps of the Data Matching Process then details its main steps like pre-processing, indexing, field and record comparison, classification and quality evaluation. Lastly, part III: Further Topics deals with specific aspects like privacy, real time matching.

or matching unstructured data Finally it briefly describes the main features of many research and open source systems available today By providing the reader with a broad range of data matching concepts and techniques and touching on all aspects of the data matching process this book helps researchers as well as students specializing in data quality or data matching aspects to familiarize themselves with recent research advances and to identify open research challenges in the area of data matching To this end each chapter of the book includes a final section that provides pointers to further background and research material Practitioners will better understand the current state of the art in data matching as well as the internal workings and limitations of current systems Especially they will learn that it is often not feasible to simply implement an existing off the shelf data matching system without substantial adaption and customization Such practical considerations are discussed for each of the major steps in the data matching process
