

Practical work in school science – why is it important?

Emma Woodley

ABSTRACT The reasons for carrying out practical work are explored and activities to increase the quality and relevance of practical work are described.

For most UK science teachers, practical work is part and parcel of what teaching and learning in science is all about. In fact, the TIMSS 2007 study (Sturman *et al.*, 2008) found that, as has been the case for many years, 13- to 14-year-old pupils in England are more likely to spend their lesson time doing practical science activities than many of their international counterparts. It also found that science teachers in England tend to adopt a more ‘hands-on’ approach to their teaching.

Given that such a large proportion of time in science lessons is spent on practical work, it is important to be able to justify that amount of time by understanding the purposes of this type of activity as a tool for teaching and learning. But in order to understand why we use practical activities, we must first consider what practical work in science is.

Earlier this year SCORE (Science Community Representing Education) produced *A framework for practical science in schools* (SCORE, 2009a), defining practical work in science as ‘a “hands-on” learning experience which prompts thinking about the world in which we live’. The associated report (SCORE, 2009b) has a list of activities that could be considered to be practical work. These fall into two main categories:

- **Core activities:** Investigations, laboratory procedures and techniques, and fieldwork. These ‘hands-on’ activities support the development of practical skills, and help to shape students’ understanding of scientific concepts and phenomena.
- **Directly related activities:** Teacher demonstrations, experiencing phenomena, designing and planning investigations, analysing results, and data analysis using

ICT. These are closely related to the core activities and are either a key component of an investigation, or provide valuable first-hand experiences for students.

A range of activities were also identified which complement, but should not be a substitute for, practical work. These complementary activities include science-related visits, surveys, presentations and role play, simulations including use of ICT, models and modelling, group discussion, and group text-based activities. They have an important role to play supporting practical work in developing understanding of science concepts.

Purposes of practical work

Most practitioners would agree that good-quality practical work can engage students, help them to develop important skills, help them to understand the process of scientific investigation, and develop their understanding of concepts. A further consequence of experiencing practical work, particularly in chemistry, is the acquisition of an understanding of hazard, risk and safe working. These are just some of the many different reasons for choosing to use a practical activity in a lesson. The *Framework for practical science in schools* also identifies a multitude of ways in which practical work can support learning in science, from ‘Personal, learning and thinking skills’ to ‘How science works’ (Figure 1). Any single activity might focus on one or more of these purposes.

A good practical task is one that achieves its aims of effectively communicating a clearly defined set of ideas, but this can sometimes be difficult to achieve. Teachers’ identified outcomes can often be quite different from the outcomes that students perceive. With any activity, communicating its purpose and learning objectives to the students can increase its

Practical experiments in school science lessons and science field trips Great Britain: Parliament: House of Commons: Science and Technology Committee,2011-09-14 Additional written evidence is contained in Volume 3 available on the Committee website at www.parliament.uk/science Practical Work in School Science Jerry Wellington,2002-01-22 Practical work has been part of science education for just over 100 years and is accepted as an essential and exciting part of understanding this discipline Although it can be costly and sometimes messy it simply has to be done if students and teachers are to progress in their understanding Schools and universities invest millions of pounds in it and the National Curriculum reveres it but what exactly is going on in classrooms around the country and how are the leading practitioners moving with the times This book attempts to reflect on the value and purpose of practical work as part of the scientific curriculum Why are practical exercises so necessary and what do they contribute to the learning process The chapters examine many issues such as how practical work is perceived by students and teachers whether we will move on to the virtual lab the limitations of current hands on work and valuable alternatives to it the connections between practical work in science education and authentic science what role experimentation plays in current educational practice Jerry Wellington is Reader in Education at Sheffield University and has taught science at all academic levels *School Science Practical Work in Africa* Umesh Ramnarain,2020-06-01 School Science Practical Work in Africa presents the scope of research and practice of science practical work in African schools It brings together prominent science educators and researchers from Africa to share their experience and findings on pedagogical innovations and research informed practices on school science practical work The book highlights trends and patterns in the enactment and role of practical work across African countries Practical work is regarded as intrinsic to science teaching and learning and the form of practical work that is strongly advocated is inquiry based learning which signals a definite paradigm shift from the traditional teacher dominated to a learner centered approach The book provides empirical research on approaches to practical work contextual factors in the enactment of practical work and professional development in teaching practical work This book will be of great interest to academics researchers and post graduate students in the fields of science education and educational policy The Place of Ethics in Science Education Amanda McCrory,Michael J. Reiss,2023-08-24 Science education particularly school science education has long had an uneasy relationship with ethics being unsure whether to embrace ethics or leave it to others In this book the authors argue that while the methods of science and of ethics are very different ethics plays a key role in how science is undertaken and used And so ethics has a central place in science education whether we are talking of school science education for students of all ages or the informal science education that takes place in through internet books magazines TV and radio or in places such as hospitals and zoos Written for science educators based in schools and elsewhere the authors make no assumptions that the reader has any knowledge of ethics beyond the background understandings of morality that virtually all of us have

Empowered with the knowledge shared in this book readers will feel confident about the place that ethics has in science education The authors provide a rich array of examples as to how science education both in school and out of school and for all ages can be enhanced through including teaching about ethics Science Learning, Science Teaching Jerry
