Application of Group I Metal Addition to the Separation of Steroids by Traveling Wave Ion Mobility Spectrometry

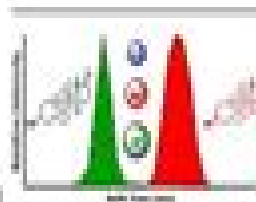

Figure 1. Schematic diagram of the experimental setup for the separation of steroids by Traveling Wave Ion Mobility Spectrometry (TWIM). The diagram shows a sample (steroids) being introduced into a TWIM system, which separates the components based on their ion mobility. The separated components are then detected by a mass spectrometer.

Traveling wave ion mobility spectrometry (TWIM) was applied to the separation of steroids based on their ion mobility. The results showed that the separation of steroids was significantly improved by the addition of group I metal ions. The results also showed that the separation of steroids was significantly improved by the addition of group I metal ions.
