

The results of Lenard and Milikan's experiment about photoelectric effect can be explained by Einstein's assumption. If we assume a photons energy as $h \cdot \nu$ (Planck constant multiplied by frequency of light), it should be absorbed by electrons on the metal plate and increase their kinetic energy for " $h \cdot \nu$ ". However, the electrons can not extract immediately because of the potential energy that binds them to the metal surface. So that, there should be enough energy to exceed a "threshold level" of energy to extract electrons from the surface.

To present in mathematical formulas:

$$E = h \cdot \nu$$

E = Energy of one photon (Joule or Electron-volt)

h = Planck constant (apx. $6.63 \times 10^{-34} \text{ j.s}$)³

ν = Frequency of light (Hz)

Kinetic energy pf photoelectrons is equal to energy of photons subtracted from potential energy between electrons and metal plate.

$$KE = h \cdot \nu - W$$

KE = Kinetic Energy

$h \cdot \nu$ = Energy of photon (Joule or Electron-volt)

W = Work function (The least required energy to extract electrons from metal surface, can be differ depend on type of metal.) (Joule or Electron-volt)

$$V_0 = W / h$$

V_0 = Stopping Potential (e.V)

W = Work function (varies on type of metal)

h = Planck Constant (apx. $6.63 \times 10^{-34} \text{ j.s}$)³

In conclusion, there are three results that observed from the experiment and calculations:

*the frequency of the light needed to reach a particular minimum value (depending on the metal) for photoelectrons to start escaping the metal¹

*the maximum kinetic energy of the photoelectrons depended on the frequency of the light¹

*the potential energy that prevents extraction of electrons from metal surface is depend on type of metal plate

and nervous systems that they are deemed to compute and why does it seldom occur to us to describe stomachs hurricanes rocks or chairs that way These questions are key to laying the conceptual foundations of computational sciences including computer science and engineering and the cognitive and neural sciences Oron Shagrir here provides an extended argument for the semantic view of computation which states that semantic properties are involved in the nature of computing systems The first part of the book provides general background Although different in scope these chapters have a common theme namely that the linkage between the mathematical theory of computability and the notion of physical computation is weak The second part of the book reviews existing non semantic accounts of physical computation Shagrir analyze three influential accounts in greater depth and argues that none of these accounts is satisfactory but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations

and Education Adrian Skilbeck, Paul Standish, 2023-07-18 WITTGENSTEIN AND EDUCATION Wittgenstein's later writings are abundant with examples and these return repeatedly to scenes of teaching and learning. Light is cast on language, belief, imagination, perception, illusion, and obsession by asking for each how it is acquired. How do we come into the practices that make up our lives? How, beyond the biological, do we become human beings? Wittgenstein wanted not to spare others the trouble of thinking but to stimulate readers to thoughts of their own. Yet so much in education today leads students and their teachers along clearly planned, direct routes to achievement, to success without the trouble of thinking. Knowledge and understanding are displaced by transferrable skills and competences, with teacher education reduced to priorities of classroom management skills and curriculum delivery. In this climate, there is a new growth of interest in the illumination Wittgenstein provides for enquiry into education. This collection, originating in the Annual Conference of the British Wittgenstein Society in 2018, celebrates this influence and demonstrates the range of Wittgenstein's importance for education.

Guide to UPSC CAPF Assistant Commandant Paper I & II Disha Experts, 2021-09-01

Trajectories of Translation Kobus Marais, 2023-06-23 This book builds on Marais's innovative A Bio Semiotic Theory of Translation to explore the implications of this conceptualization of translation as the semiotic work from which social/cultural reality emerges and chart the way forward for applications in empirical research. The volume brings together some of the latest developments in biosemiotics, social semiotics, and Peircean semiotics with emergent work in translation studies towards better understanding the emergence of trajectories in society/culture through semiotic processes. The book further develops lines of thinking around thermodynamics in the work of Terrence Deacon to consider the ways in which ideas emerge from matter, creating meaning and its opposites, namely the ways in which ideas constrain matter. Marais links these theoretical strands to empirical case studies in the final three chapters towards operationalizing these concepts for further empirical work. This book is aimed at academics in the fields of translation studies, semiotics, multimodal/multimedial studies, cultural studies, and development studies. It will also be applicable to postgraduate students in these fields.
