Self-Organizing Systems F.Eugene Yates, 2012-12-06 Technological systems become organized by commands from outside as when human intentions lead to the building of structures or machines But many natural systems become structured by their own internal processes these are the self organizing systems and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines Unfortunately complexity is ill defined Global explanatory constructs such as cybernetics or general systems theory which were intended to cope with

complexity produced instead a grandiosity that has now mercifully run its course and died. Most of us have become wary of proposals for an integrated systems approach to complex matters yet we must come to grips with complexity somehow. Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them. If they do then a fresh multidisciplinary attack on the difficulties would be a valid scientific task. Believing that complexity is a proper scientific issue and that self-organizing systems are the foremost example, R. Tomovic, Z. Damjanovic, and I arranged a conference August 26-September 1, 1979 in Dubrovnik, Yugoslavia to address self-organizing systems. We invited 30 participants from seven countries. Included were biologists, geologists, physicists, chemists, mathematicians, bio-physicists, and control engineers. Participants were asked not to bring manuscripts but rather to present positions on an assigned topic. Any writing would be done after the conference when the writers could benefit from their experiences there.

Provides a common focal point for bridging the gap between and unifying System Users, System Acquirers, multi-discipline System Engineering, and Project Functional and Executive Management education, knowledge, and decision making for developing systems, products, or services. Each chapter provides definitions of key terms, guiding principles, examples, author's notes, real world examples, and exercises which highlight and reinforce key SE specification, development, system architecture, development, User-Centric System Design (UCSD), interface definition, system integration, and Verification Life Cycle requirements. Phases, Modes, SE Process, Requirements Derivation, System Architecture Development, User-Centric System Design, UCSD, Engineering Standards, Coordinate Systems, and Conventions, et al.
