Chemistry Formal Experiment: *Using flame colours to identify unknown metal ions*

August 2024

60 Marks

1 hour

Full Name:

Introduction:

The flame test is used to visually determine the identity of an unknown metal or metalloid, as an element or in a compound, based on the characteristic colour the salt turns the flame of a burner. When an electron in an excited state (higher energy) returns to its ground state (lower energy), an atomic spectrum is produced. A specific quantity of energy is associated with each electron, and when an electron returns to a lower energy level, a specific quantity of energy is released. The energy is released as electromagnetic radiation. Certain wavelengths will be visible to the naked eye; other wavelengths can only be detected with instruments. In the activity below, we will investigate the colours emitted by certain metal atoms. Different colours indicate different wavelengths of visible radiation.

Materials:

- ☐ NaCl(aq) , KCl(aq) , $\text{CaCl}_2 \cdot 2\text{H}_2\text{O(aq)}$, $\text{CuCl}_2 \cdot 2\text{H}_2\text{O (aq)}$,
- ☐ copper powder, magnesium powder,
zinc powder, iron powder
- ☐ four unknown salt solutions
- ☐ Bunsen burner
- ☐ Nichrome wire

Scientific and Technical Aerospace Reports, 1992 **Persisting Pandemics** Powel H. Kazanjian, 2024-11-15 *Persisting Pandemics* explores the history of syphilis and AIDS to provide insights into the limits of biomedicine and our experience with epidemics today Novel therapies developed for syphilis and AIDS became renowned in the medical field and the broader public sphere as exemplars of biomedical innovations Public health campaigns based on these spectacular biomedical advances however have repeatedly fallen short of their goals to eliminate syphilis and AIDS in the population The diseases epitomize the power of innovative biomedical therapies for the individual while unveiling limitations of scientific medicine in the domain of public health The need for a public health approach to address mistrust in science government indifference and racial inequalities is relevant for strategies to eliminate COVID 19 today *Persisting Pandemics* argues that campaigns to eliminate these diseases have not succeeded because they have not adequately addressed how diseases like AIDS syphilis and COVID spread unevenly in populations according to race ethnicity and geographic location Despite the expectation of public health officials that medical advances would render epidemics obsolete new diseases continue to emerge and spread regardless of efforts to eliminate them Medical doctor and historian Powel H Kazanjian concludes that narratives of syphilis AIDS and COVID unlike smallpox do not contain a discrete ending at least not within the timelines specified by their elimination campaigns Instead they will be a continued part of our existence **Yearbook of International Organizations**
