Physical Science Paper 2 June 2012:

The Age of Scientific Naturalism Bernard Lightman, Michael S. Reidy, 2016-02-19 Physicist John Tyndall and his contemporaries were at the forefront of developing the cosmology of scientific naturalism during the Victorian period. They rejected all but physical laws as having any impact on the operations of human life and the universe. Contributors focus on the way Tyndall and his correspondents developed their ideas through letters, periodicals, and scientific journals, and challenge previously held assumptions about who gained authority and how they attained and defended their position within the scientific community.

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 *Spacecraft Dynamics and Control: The Embedded Model Control Approach* provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model-based control using state-space equations as the key paradigm for simulation, design, and implementation. The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems. The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment. The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class. The source of the real-time uncertainty estimation

prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Successful Adaptation to Climate Change Susanne Moser, Maxwell Boykoff, 2013-07-18 What does successful adaptation look like This is a question we are frequently asked by planners policy makers and other professionals charged with the task of developing and implementing adaptation strategies While adaptation is increasingly recognized as an important climate risk management strategy and on the ground adaptation planning activity is becoming more common place there is no clear guidance as to what success would look like what to aim for and how to judge progress This edited volume makes significant progress toward unpacking the question of successful adaptation offering both scientifically informed and practice relevant answers from various sectors and regions of the world It brings together 18 chapters from leading experts within the field to present careful analyses of different cases and situations questioning throughout commonly avowed truisms and unspoken assumptions that have pervaded climate adaptation science and practice to date This book offers not one answer but demonstrates how the question of success in important ways is normative and context specific It identifies the various dimensions of success such as economic political institutional ecological and social explores the tensions between them and compiles encouraging evidence that resolutions can be found The book appraises how climatic and non climatic stressors play a role what role science does and can play in adaptation decision making and how trade offs and other concerns and priorities shape adaptation planning and implementation on the ground This is timely interdisciplinary text sheds light on key issues that arise in on the ground adaptation to climate change It bridges the gap between science and practical application of successful adaptation strategies and will be of interest to both students academics and practitioners

Education and Educators The Emirates Center for Strategic Studies and Research, 2016-06-06 Teachers are in the eyes of many the essential ingredient of success fueling educational development The advancement of teaching and learning standards both inside and outside of the classroom hinges upon the effective participation of teachers in the relevant professional development programs being implemented in schools worldwide In this regard a number of valuable lessons can be learned from the experiences of countries that boast widely respected modern education systems Such lessons can subsequently be utilized to the advantage of other nations including the GCC states which are actively exploring a number of potential avenues in view of bolstering their respective teacher training and professional development programs As highlighted in this volume through a number of different case studies and with reference to the best practices being employed in the likes of the United Kingdom Finland and South Korea the provision of financial benefits and the elevation of teachers standing in society represent two prominent factors that enable the cultivation of a culture of excellence in the classroom In the Gulf research suggests that greater support should be given to highly educated and productive nationals who have chosen to pursue a career in teaching based on an acknowledgement of the pivotal role that teachers play in terms of assisting human and societal development which in turn heightens the prospects of long term economic prosperity The retention of competent teachers is equally imperative particularly for the education process itself whereby experienced teachers serve as welcomed role models for the next generation of teachers Possible solutions include the construction of specific more appealing career paths the provision of professional development and further education opportunities and raising societal awareness of the vital role played by teachers The scholarly papers presented in this book provide a comprehensive overview of the current situation that teachers are facing in certain GCC countries compared to other countries across the globe The insights and recommendations presented therein highlight a range of key aspects that are central to professional teacher development which if acted upon serve to enhance the standard of education in any given country

The Other Canon of Economics, Volume 1 Erik Reinert, 2024-02-13 Other Canon Economics Essays in the Theory and History of Uneven Economic Development brings together key essays on development economics from one of the most prolific and important development economists and historians of economic policy today Erik S Reinert argues through essays ranging from 1994 to 2020 that neo classical economics damages developing countries the theory of comparative advantage leaves out a number of factors which make economic activities qualitatively different as carriers of economic growth Based on a long intellectual tradition started by the Italian economists Giovanni Botero 1589 and Antonio Serra 1613 and later used in virtually all presently industrialised countries Reinert shows that the country which exports increasing returns goods e g high end manufacture has advantages over the country which exports diminishing returns goods e g commodities This has important implications for today s development strategies that Reinert argues should be seen as industrial strategies

Kuperman,2013-04-17 This book examines the prospects and challenges of a global phase out of highly enriched uranium and the risks of this material otherwise being used by terrorists to make atom bombs Terrorist groups such as Al Qaeda have demonstrated repeatedly that they seek to acquire nuclear weapons Unbeknownst even to many security specialists tons of bomb grade uranium are trafficked legally each year for ostensibly peaceful purposes If terrorists obtained even a tiny fraction of this bomb grade uranium they could potentially construct a nuclear weapon like the one dropped on Hiroshima that killed tens of thousands Nuclear experts and policymakers have long known of this danger but so far have taken only marginal steps to address it

This volume begins by highlighting the lessons of past successes where bomb grade uranium commerce has been eliminated such as from Argentina's manufacture of medical isotopes. It then explores the major challenges that still lie ahead for example Russia's continued use of highly enriched uranium HEU in dozens of nuclear facilities. Each of the book's thirteen case studies offers advice for reducing HEU in a specific sector. These insights are then amalgamated into nine concrete policy recommendations for U.S. and world leaders to promote a global phase out of bomb grade uranium. This book will be of much interest to students of nuclear proliferation, global governance, international relations and security studies.

The Making of Modern Physics in Colonial India Somaditya Banerjee, 2020-05-14. This monograph offers a cultural history of the development of physics in India during the first half of the twentieth century focusing on Indian physicists Satyendranath Bose (1894-1974), Chandrasekhara Venkata Raman (1888-1970) and Meghnad Saha (1893-1956). The analytical category bhadrakalok physics is introduced to explore how it became possible for a highly successful brand of modern science to develop in a country that was still under colonial domination. The term Bhadrakalok refers to the then emerging group of native intelligentsia who were identified by academic pursuits and manners. Exploring the forms of life of this social group allows a better understanding of the specific character of Indian modernity that as exemplified by the work of bhadrakalok physicists combined modern science with indigenous knowledge in an original program of scientific research. The three scientists achieved the most significant scientific successes in the new revolutionary field of quantum physics with such internationally recognized accomplishments as the Saha ionization equation (1921), the famous Bose-Einstein statistics (1924) and the Raman Effect (1928), the latter discovery having led to the first ever Nobel Prize awarded to a scientist from Asia. This book analyzes the responses by Indian scientists to the radical concept of the light quantum and their further development of this approach outside the purview of European authorities. The outlook of bhadrakalok physicists is characterized here as cosmopolitan nationalism which allows us to analyze how the group pursued modern science in conjunction with and as an instrument of Indian national liberation.
