

Recommended Curriculum Guidelines for Family Medicine Residents

Conditions of the Skin

This document is endorsed by the American Academy of Family Physicians (AAFP).

Introduction

This Curriculum Guideline defines a recommended training strategy for family medicine residents. Attitudes, behaviors, knowledge, and skills that are critical to family medicine should be attained through longitudinal experience that promotes educational competencies defined by the Accreditation Council for Graduate Medical Education (ACGME), www.acgme.org. The family medicine curriculum must include structured experience in several specified areas. Much of the resident's knowledge will be gained by caring for ambulatory patients who visit the family medicine center, although additional experience gained in various other settings (e.g., an inpatient setting, a patient's home, a long-term care facility, the emergency department, the community) is critical for well-rounded residency training. The residents should be able to develop a skillset and apply their skills appropriately to all patient care settings.

Structured didactic lectures, conferences, journal clubs, and workshops must be included in the curriculum to supplement experiential learning, with an emphasis on outcomes-oriented, evidence-based studies that delineate common diseases affecting patients of all ages. Patient-centered care, and targeted techniques of health promotion and disease prevention are hallmarks of family medicine and should be integrated in all settings. Appropriate referral patterns, transitions of care, and the provision of cost-effective care should also be part of the curriculum.

Program requirements specific to family medicine residencies may be found on the ACGME website. Current AAFP Curriculum Guidelines may be found online at www.aafp.org/cg. These guidelines are periodically updated and endorsed by the AAFP and, in many instances, other specialty societies, as indicated on each guideline.

Health Humanities in Postgraduate Medical Education Allan D. Peterkin,Anna

Skorzewska,2018-07-27 Most medical schools in the US Canada and UK now incorporate some form of arts and humanities based teaching into their curricula What happens in residency is another story Most postgraduate programs do not continue the thread of such teaching although many residents would like to deepen their understanding of the medical humanities before they move into practice The humanities emphasize the human side of medicine and can provide a counterpoint to the reductionism of evidence based medicine and technological hubris for young doctors as they apply new knowledge and skills in ambiguous real life encounters with patients who are living with complicated health problems Humanities based education can help both sides of the relationship programs are shown to reduce burnout and mental health issues in young physicians and can also help learning practitioners grapple with the most difficult aspects of their craft how does one persuade patients

on a course of treatment while respecting informed consent How does one work with families How does one listen to and treat patients exhibiting self harm tendencies Available research may demonstrate the efficacy of such exposures but provide little practical advice or resources for setting up programs across specialty and sub specialty disciplines Health Humanities in Post Graduate Medical Education will fill this gap in knowledge translation for the thousands of residency programs worldwide allowing educators supervisors and residents themselves to create robust and educationally sound workshops seminars study groups lecture series research and arts based projects publications and events

Cultural Competence in Health Care Janice L. Dreachslin, M. Jean Gilbert, Beverly Malone, 2012-11-05 Major changes are occurring in the United States population and the nation's health care institutions and delivery systems. Significant disparities in health status exist across population groups. But the health care enterprise with all its integrated and disparate parts has been slow to respond. Written by three nationally known scholars and experts, *Diversity and Cultural Competence in Health Care: A Systems Approach* is designed to provide health care students and professionals with a clear understanding of foundations, philosophies, and processes that strengthen diversity management, inclusion, and culturally competent care delivery. Focusing on current practice and health care policy, including the recently passed Patient Protection and Affordable Care Act of 2010 (ACA), this textbook integrates strategic diversity management, self-reflective leadership, and the personal change process with culturally and linguistically appropriate care into a cohesive, systems-oriented approach for health care professionals. The essentials of cultural competence and diversity management covered in this text will be helpful to a wide variety of students because they encompass principles and practices that can be realistically incorporated into the ongoing work of any health care field or organization. Each chapter contains learning objectives, summary, key terms, and review questions and activities designed to allow students to understand and explore concepts and practices identified throughout the text.
