Exterior Lighting - Exterior Lighting

Description and Operation

A multi function switch located on the left side of the steering column (with assembly) provides operation of either a (park), headlamps, aux headlamp or off. Selection of a particular mode provides the appropriate input to the body processor module (BPM).

When the aux headlamp function is incorporated, a light sensor in the interior rear view mirror (module) provides an input to the BPM. The BPM responds by switching the aux beam headlamps on or off as appropriate for prevailing light conditions.

The front and rear fog lamp switch is located on the floor, outboard of the steering column.
