Revaluation and Preservation of Indigenous Knowledge Systems in Modern Society Tlou Masenya, Monicca Bhuda, 2025

The overall objective of this book is to present scholarly perspectives ideas and recommendations in addition to publishing excellent articles that explore the role and importance of indigenous knowledge in the modern society Economic Growth And Development (Third Edition) Hendrik Van Den Berg, 2016-09-02 This textbook covers the full range of topics and issues normally included in a course on economic growth and development Both mainstream economic perspectives as well as the multi paradigmatic inter disciplinary and dynamic evolutionary perspectives from heterodox economics are detailed Economic development is viewed in terms of the long run well being of humanity social stability environmental sustainability and just distribution of economic gains not simply as the growth of GDP Furthermore this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and natural environments The textbook s unique feature is its focus on the natural environment Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies In fact because economic development is defined in terms of economic social and environmental sustainability the natural environment is included in discussions throughout the book The textbook is inter disciplinary knowledge from fields such as sociology psychology political science economic history and ecology is called on to enhance the economic analysis A thorough historical account of the development of the principal paradigms of economic development is also included and the important issues of institutional development and cultural change merit their own chapters Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic social and ecological systems Also the important relationship between economic development and globalization is presented in three chapters on international trade international finance and investment and immigration from both orthodox and heterodox perspectives The Labyrinth of Technology Willem H. Vanderburg, 2000-12-15 Why does modern technology succeed so brilliantly in some respects and simultaneously fail in others While he was completing a doctoral thesis in mechanical engineering in the late 60s and early 70s Willem Vanderburg became convinced that the environmental crisis and the possible limits to growth would require a fundamental change in the engineering management and regulation of technology In this volume he exposes the limitations of conventional approaches in these fields Modern societies urgently need to rethink the intellectual division of labour in science and technology and the corresponding organization of the university corporation and government in order to get out of a self destructive pattern where problems are first created by some than then dealt with by others making it almost impossible to get to the roots of anything The result is what he calls the labyrinth of technology a growing patchwork of compensations that merely displace and transform problems from one place to another The author s diagnosis suggests the remedy a new preventive strategy

that situates technological and economic growth in its human societal and biospheric contexts and calls for a synthesis of methods in engineering management and public policy and of approaches in the social sciences and humanities He also suggests that this same synthesis can be applied in medicine law social work and other professions The Labyrinth of Technology is a unique and invaluable text for students academics and laypersons in all disciplines and speaks to those who are torn between the benefits that modern technology provides and the difficulties it creates in our individual and collective lives

Precision-guided Munitions and Human Suffering in War James E. Hickey, 2016-04-08 James Hickey proceeds from the premise that throughout history humans have demonstrated a proclivity for using violence against one another as a means to achieve an end means enabled in many respects by the technologies available at the time Advancing technology has often been a prime enabler of ever increasing levels of violence and attendant human suffering At a few junctures in history however certain technologies have seemingly provided the armed forces that possess them the ability to fight wars with decreasing levels of violence and suffering Today precision guided munitions PGMs with their high degree of discrimination and accuracy again hold such promise This book seeks to answer the question Do PGMs mitigate suffering in war and have these weapons changed the way decisions regarding war and peace have been made Answering this question helps us understand possible shifts in emphasis in modern warfare both in terms of methods employed and of the greater concern placed on limiting human suffering during conflict This book will help students of ethics just war and military history and senior military and civilian leaders to understand the possible outcomes and wider implications of their strategic choices to use such technology

The Soldier in Modern Society J. C. M. Baynes, 2020-12-22 During the few years prior to publication there had been a growing interest not only in the organisation and efficiency of the British Army but also in its role in modern British society and the place of soldiering as a significant career The time was therefore ripe for

a book such as this which looks objectively at the position of our Army whilst at the same time showing the actual experience of a Regular soldier Originally published in 1972 Colonel Baynes's book was largely written during a year's Defence Fellowship at Edinburgh University in 1968-9 where he worked under Professor John Erickson in the Higher Defence Studies sections of the Department of Politics He begins by examining the ways in which armies can be used and then turns to more specific issues connected with the employment of the British Army in the modern world He summarises what the British Army has accomplished since 1945 and how its strength has varied and follows with a chapter on the cost of maintaining it The core of the book revolves around three basic questions First what in the 1970s does British society really think about its Army and what sort of army does it want Second how can soldiers be kept keen and efficient in a period of prolonged peace And third who will join the Army in the coming years what will their conditions of service be like and what are their career opportunities Some of Colonel Baynes's solutions to these problems are likely to be unpopular with traditionalists although he is by no means an iconoclast and has a deep affection for and belief in his own profession At the time this book was strongly recommended to all with an interest in the security of this country and the future of its armed forces both those serving in them and civilians

Freud and Modern Society Bocock, 2013-04-17 by Ronald Fletcher To devote a volume to Freud in a series on The Making of Sociology might seem to some readers very strange Freud they might argue was not only and very explicitly a psychologist but also and equally explicitly a clinical psychologist whose most immediate preoccupation was that of trying to cure the mental illnesses of his patients Furthermore he was a psychologist who insisted on relating his theories as closely as possible to biological and physiological facts All this of course is true But to adopt this view as one which distinctly marks Freud off from sociology is a basic mistake and one which shows how sadly subjects which were once seen as being essentially interrelated have been forced into false separation by the current vogue of specialization necessary and correct when it is soundly conceived but intellectually disastrous when it is not

It is worthwhile to recall that all the major thinkers who contributed to the making of sociology from Comte and Spencer to Ward Giddings Tonnies Durkheim Hobhouse Weber Simmel Pareto this could be a very long list I were in fact convinced about the close relationships between biology psychology and sociology The same is true of all the major anthropologists The simple truth is that all these men were critically and creatively participating in the revolution which was taking place in man's approach to his knowledge of nature and of his own nature and place within it *Connected to Place* Matt

In 1934 Lewis Mumford critiqued the industrial energy system as a key source of authoritarian economic and political tendencies in modern life. Recent debate continues to engage issues of energy authoritarianism focusing on the contest between energy driven globalization, the spread of energy deregulation and the simultaneous consolidation of the oil, coal and gas industries and the so called sustainable energy strategy that celebrates the local and community scale characteristics of renewable energy. Including theoretical inquiries and case studies by distinguished writers, *Transforming Power* is divided into three parts: Energy, Environment and Society; The Politics of Conventional Energy; and The Politics of Sustainable Energy. It interrogates current contemporary energy assumptions exploring the reflexive relationship between energy, environment and society and examining energy as a social project. Some of these have promised a prosperous future founded upon technological advances that further modernize the modern energy system such as inherently safe nuclear power, environmentally friendly coal gasification and the advent of a wealthier, cleaner world powered by fuel cells and the green technologies said by advocates to prefigure a revival of human scale development, local self determination and a commitment to ecological balance. This volume offers a timely engagement of the social issues surrounding energy conflicts and contradictions. It will be of interest to policymakers, energy and environmental experts, sociologists and historians of technology.

Anxiety, Modern Society, and the Critical Method Joel Michael Crombez, 2021-03-08. *Anxiety, Modern Society and the Critical Method* interrogates the historical intersections of political economy, technology and anxiety. By analyzing and building upon the tools developed by critical theorists to diagnose the symptoms of modern life such as alienation, anomie, the Protestant ethic and repression, Joel Michael Crombez convincingly argues for a revitalization of critical social science to better confront the anxiety of life in modern societies. With anxiety typically falling under the purview of psychology and its biomedical approach to treatment, here anxiety is demonstrated to have origins in the totalizing logics of modern society. As such, Crombez provides an interdisciplinary roadmap to diagnose and treat anxiety, which he calls critical socioanalysis that accounts for the psychosocial complexity of its production.
