

Information Security Audit Checklist

Your audit's goals, scope, and purpose determine the appropriate audit procedures and questions. An audit of information security should determine that key risks to the organization are being controlled, that key controls are operating effectively and consistently, and that management and staff have the ability to recognize and respond to new threats and risks as they arise.

The following checklist generally describes information security audit steps that management might follow in preparation for and during an audit. The list does not attempt to limit every possible information security objective, but rather to provide general guidance on defensible controls and a logical control hierarchy.

Audit Planning

- ☐ The audit team develops an initial draft of the internal audit plan.
- ☐ Managers of the information security program and other appropriate executives meet with the audit team to review audit program steps and define key players and necessary resources.
- ☐ Management collects program documentation in preparation for audit.
- ☐ Management supports a preliminary survey of the information security program (by the internal audit team).
- ☐ The audit team drafts the internal audit program plan.
- ☐ Management and board members provide feedback on the draft plan.

Audit Testing

Management has a responsibility to ensure that audit testing is productive. The audit team performs tests to independently assess the performance of the information security program and, while the audit team ultimately determines the nature of these tests and the extent of testing (e.g. the sample sizes to use), management should engage auditors in discussions about their testing methods and goals.

In some, management should try to strike a balance, neither entirely deferring to the audit team nor micro-managing the internal audit efforts. The key is to provide productive input on the evaluation methodology before audit management signs off on it.

As the testing phase winds up, the audit team will prepare summaries of its key findings. Information security managers should be prepared to provide feedback and comments on audit summaries, prior to the more final, formal audit report.

Proactive communication, candor from all parties, and thorough documentation can prevent many surprises and conflicts that might otherwise arise during the testing phase; however, managers might still disagree from time to time with audit results. Management should strive to provide solid evidence—not just arguments—that supports its contrasting position. Facts are the most successful tool for swaying an adverse opinion before the audit report is finalized.

Since the audit report often forms the basis of future security focus and investment, management should ensure that every audit point raised—and its related recommendation—is relevant and valid. Likewise, every action plan proposed by managers or auditors should be achievable, appropriate, cost effective, and able to produce lasting effect.

Auditing IT Infrastructures for Compliance Martin Weiss,Michael Solomon,2010-09-15 PART OF THE NEW JONES BARTLETT LEARNING INFORMATION SYSTEMS SECURITY ASSURANCE SERIES Information systems and IT infrastructures are no longer void from governance and compliance given recent U S based compliancy laws that were consummated during the early to mid 2000s As a result of these laws both public sector and private sector verticals must have proper security controls in place Auditing IT

Infrastructures for Compliance identifies and explains what each of these compliancy laws requires. It then goes on to discuss how to audit an IT infrastructure for compliance based on the laws and the need to protect and secure business and consumer privacy data. It closes with a resource for readers who desire more information on becoming skilled at IT auditing and IT compliance auditing. Cyber Security and Privacy Control Robert R. Moeller, 2011-04-12 This section discusses IT audit cybersecurity and privacy control activities from two focus areas. First is focus on some of the many cybersecurity and privacy concerns that auditors should consider in their reviews of IT based systems and processes. Second focus area includes IT Audit internal procedures. IT audit functions sometimes fail to implement appropriate security and privacy protection controls over their own IT audit processes such as audit evidence materials, IT audit workpapers, auditor laptop, computer resources and many others. Although every audit department is different, this section suggests best practices for an IT audit function and concludes with a discussion on the payment card industry data security standard, data security standards PCI DSS, a guideline that has been developed by major credit card companies to help enterprises that process card payments prevent credit card fraud and to provide some protection from various credit security vulnerabilities and threats. IT auditors should understand the high level key elements of this standard and incorporate it in their review where appropriate.
