Direct seed marketing program in Ethiopia in 2013 Benson, Todd, Spielman, David, Kasa, Leulseged, 2014-05-27 In 2013 the Bureaus of Agriculture in the regional states of Amhara Oromia and Southern Nations Nationalities and Peoples of Ethiopia supported a program of direct marketing of certified seed by seed producers to farmers across 31 woredas districts This program stands in contrast to the dominant procedure for supplying such seed in which farmers register with local agricultural offices or extension agents to purchase seed for the coming cropping season and then receive seed either directly from these local offices or through local cooperatives The evaluation shows that competition between entrepreneurial seed producers to capture a substantial portion of the market of farmer customers for their seed to enable their firms to remain in business will propel wider and more effective distribution of new and improved hybrid maize to more and more farmers *Seed Production by Smallholder Farmers* J. Hanson, 1994-01-01 *Farmers' Maize Seed Systems in Western Oromia, Ethiopia*, 2001 *Advances in Research on Potato Production* Shashank Shekhar Solankey, 2025-06-11

Potato *Solanum tuberosum* L is the world s third most important food crop and the fourth most important food crop in India Potatoes are nutritionally rich fat free gluten free and high in dietary fibre They are also a good source of vitamin C vitamin B6 phenols iron potassium phosphorus magnesium and protein as compared to cereals They are more energy packed than any other popular vegetables and have the ability to combat hidden hunger which is a major global health issue The potato is also considered the king of vegetables due to its versatile uses and is an important staple food worldwide According to the FAOSTAT database 2023 global potato production in 2022 was 375 million tonnes with the top producers being China 95.5 million tonnes and India 56 million tonnes The United Nations declared 2008 the International Year of the Potato IYP to increase awareness of the relationship that exists between poverty food security malnutrition and the potential contribution of the potato in defeating hunger Moreover this magical crop can generate a higher yield compared to the other crops hence it is one of the most notable crops to eliminate hunger and poverty Therefore sustainable potato production is important for food security and social welfare in future climate change scenarios It is important to inform that potatoes have a shallow root system and are highly sensitive to environmental conditions and climate change It is projected that potato yield may decrease up to 32 per cent by 2050 due to increasing temperatures and drought conditions Thus future potato breeding programmes should focus on enhancing abiotic and biotic stress tolerance through the utilization of the natural germplasm conserved in different gene banks along with climate friendly agronomical practices Moreover potato breeding should benefit from the effectiveness and ease of molecular techniques such as marker assisted selection genome wide association studies functional genomics and transgenics The development of new potato varieties can also be achieved via genetic engineering and genome editing Disease free potato seed production requires the integration of tissue culture methods followed by the production of mini tubers under an aeroponic system As it is a staple food for millions and demand for potatoes will increase in the future which makes this crop suitable for future research Hence the present book is formulated for professionals researchers and

post graduate students who is working with advanced production breeding and post harvest technologies on potato crop specially in Indian perspective

Root, Tuber and Banana Food System Innovations Graham Thiele, Michael Friedmann, Hugo Campos, Vivian Polar, Jeffery W. Bentley, 2022-04-06 This open access book describes recent innovations in food systems based on root tuber and banana crops in developing countries These innovations respond to many of the challenges facing these vital crops linked to their vegetative seed and bulky and perishable produce The

innovations create value food jobs and new sources of income while improving the wellbeing and quality of life of their users Women are often key players in the production processing and marketing of roots tubers and bananas so successful innovation needs to consider gender These crops and their value chains have long been neglected by research and development hence this book contributes to filling in the gap The book features many outcomes of the CGIAR Research Program in Roots Tubers and Banana RTB which operated from 2012-21 encompassing many tropical countries academic and industry partners multiple crops and major initiatives It describes the successful innovation model developed by RTB that brings together diverse partners and organizations to create value for the end users and to generate positive economic and social outcomes RTB has accelerated the scaling of innovations to reach many end users cost effectively Though most of the book's examples and insights are from Africa they can be applied worldwide The book will be useful for decision makers designing policies to scale up agricultural solutions for researchers and extension specialists seeking practical ideas and for scholars of innovation
