Seepage, Drainage, and Flow Nets

THIRD EDITION

A blue flow net diagram is overlaid on the dark red background. It consists of a grid of lines: some are straight and vertical, while others are curved, forming a series of lens-shaped cells. The curved lines represent streamlines, and the straight lines represent equipotential lines, illustrating the flow of water through a porous medium.

Reflections on Slope Stability Engineering Edward N. Bromhead,2023-09-19 Slope stability engineering is both an art and a science practised by many civil and geotechnical engineers involved in work on landslides earth dams breakwaters coastal defence earthworks slopes for roads canals railways pipelines housing developments and other related developments This book contains the detailed reflections of its author who has practised and researched in the field for over a half century It is written in an informal style that makes it an interesting and thought provoking practitioner guide to landslides and slope problems and their investigation analysis and remediation considering both natural and man made slopes and earthworks and without the need for the usual equations and illustrations Reflections on Slope Stability Engineering is targeted primarily at practitioners working in the investigations of slope instability and the design and construction of treatments of the problem especially those early in their careers but the accessible style also suits students who are developing an interest in the subject and even those engineers with only a casual interest in this branch of geotechnics

Cost-effective and Sustainable Road Slope Stabilization and Erosion Control Laura Fay,Michelle Akin,Xianming Shi,National Cooperative Highway Research Program,2012 In the United States it is estimated that 75 percent of all roads are low volume roads maintained by some 35 000 local agencies Low volume roads often omit surface slope protection and this can lead to slope failure erosion and maintenance safety and ecological issues This report presents information on cost effective and sustainable road slope stabilization techniques with a focus on shallow or near surface slope stabilization and related erosion control methods used on low volume roads To fully address this topic planning and site investigation are discussed as well as erosion control techniques soil bioengineering and biotechnical techniques mechanical stabilization and earthwork techniques Information presented in this report was obtained through an extensive literature review and from survey and interview responses From the survey responses 30 individuals were interviewed based on the information they made available in the survey A total of 25 interviews were conducted over the phone and in two cases written responses were received
