GEOLOGY 3410
MIDTERM EXAM II**

NAME: _____

Section I	____/20
Section II	____/20
Section III	____/30
Extra Credit	____/4
Total Score:	____/70

SECTION I: Short answer questions. Each question is worth 2 points.

1) Explain the difference between autecology and synecology.

Autecology: The behavior of an individual organism and its relationship to the environment.

Synecology: The ecology of communities of organisms and their relationships to the environment.

2) Explain the difference between background and mass extinctions.

Background Extinction: Continuous, low-level extinction. The extinction rate never hits zero. Rate ~5 families/million years.

Mass Extinction: Extinctions in which the rate exceeds background extinction rate by a factor of two or so.

3) What are the three phases of extinction. Draw a figure with time on the x-axis and diversity on the y-axis and show the three phases.

Paleobiology Exam Questions And Answers:

The Paleobiology of Australopithecus Kaye E. Reed, John G Fleagle, Richard E Leakey, 2013-03-15 Australopithecus species have been the topic of much debate in palaeoanthropology since Raymond Dart described the first species Australopithecus africanus in 1925 This volume synthesizes the geological and paleontological context of the species in East and South Africa covers individual sites such as Dikika Hadar Sterkfontein and Malapa debates the alpha taxonomy of some of the species and addresses questions regarding the movements of the species across the continent Additional chapters discuss the genus in terms of sexual dimorphism diet reconstruction using microwear and isotopic methodologies postural and locomotor behavior and ontogeny Paleobiology ,1987 Publishes original articles that emphasize biological or paleobiological processes and patterns including speciation extinction development of individuals and colonies natural selection evolution and patterns of variation abundance and distribution of organisms in space and time Papers concerning recent organisms and systems are also included if they aid in understanding the fossil record and the history of life

Stratigraphic Paleobiology Mark E. Patzkowsky, Steven M. Holland, 2022-12-22 Whether the fossil record should be read at face value or whether it presents a distorted view of the history of life is an argument seemingly as old as many fossils themselves In the late 1700s Georges Cuvier argued for a literal interpretation but in the early 1800s Charles Lyell s gradualist view of the earth s history required a more nuanced interpretation of that same record To this day the tension between literal and interpretive readings lies at the heart of paleontological research influencing the way scientists view extinction patterns and their causes ecosystem persistence and turnover and the pattern of morphologic change and mode of speciation With *Stratigraphic Paleobiology* Mark E Patzkowsky and Steven M Holland present a critical framework for assessing the fossil record one based on a modern understanding of the principles of sediment accumulation Patzkowsky and Holland argue that the distribution of fossil taxa in time and space is controlled not only by processes of ecology evolution and environmental change but also by the stratigraphic processes that govern where and when sediment that might contain fossils is deposited and preserved The authors explore the exciting possibilities of stratigraphic paleobiology and along the way demonstrate its great potential to answer some of the most critical questions

about the history of life How and why do environmental niches change over time What is the tempo and mode of evolutionary change and what processes drive this change How has the diversity of life changed through time and what processes control this change And finally what is the tempo and mode of change in ecosystems over time **Marine Conservation**

Paleobiology Carrie L. Tyler,Chris L. Schneider,2018-04-26 This volume describes and explores the emerging discipline of conservation paleobiology and addresses challenges faced by established and young Conservation Paleobiologists alike In addition this volume includes applied research highlighting how conservation paleobiology can be used to understand ecosystem response to perturbation in near and deep time Across 10 chapters the book aims to 1 explore the goals of conservation paleoecology as a science 2 highlight how conservation paleoecology can be used to understand ecosystems responses to crises 3 provide case studies of applications to modern ecosystems 4 develop novel applications of paleontological approaches to neontological data and 5 present a range of ecosystem response and recovery through environmental crises from high resolution impacts on organism interactions to the broadest scale of responses of the entire marine biosphere to global change The volume will be of interest to paleoecologists paleobiologists and conservation biologists **Precambrian Paleontology** Juliana Leme,Shuhai Xiao,Dermeval Aparecido Do Carmo,2022-09-29 **A-level**

Integrating Conservation Biology and Paleobiology to Manage Biodiversity and Ecosystems in a Changing World G. Lynn Wingard,Chris Schneider,Gregory P. Dietl ,Damien Fordham, Policy makers and resource managers must make decisions that affect the resilience and sustainability of natural resources including biodiversity and ecosystem services However these decisions are often based on evidence or theory derived from highly altered systems and over short time periods of low magnitude environmental and climatic change Because natural systems change and evolve across multiple timescales from instantaneous to millennial long term understanding of how past life has responded to perturbations can inform resource managers By using these natural laboratories of the past conservation paleobiology and paleoecology provide the framework necessary to anticipate and plan for future changes The goal of this Research Topic is to heighten

awareness among conservation and restoration practitioners to the value and applications of long term perspectives provided by conservation paleobiology and paleoecology Most conservation studies focus on systems already impacted by anthropogenic change these studies would benefit from paleontological data through expanded temporal scales identification of baselines and an understanding of how organisms have responded to past changes However resource management decisions rarely include input from paleontologists and paleoecological research is rarely incorporated into conservation decision making We seek to bridge this research implementation gap by highlighting the application of paleoecological data to issues such as biodiversity dynamics extinction risks and resilience to perturbations among other topics We hope to foster new cross disciplinary synergies by encouraging conservation scientists and managers to collaborate with paleontologists to improve conservation decision making and by increasing awareness among paleontologists to the needs of the resource management community This Research Topic will provide a forum for both the paleontological and resource management communities to exchange ideas that will enhance restoration and conservation decision making We invite papers on conceptual advances reviews of specific topics to guide efforts in research or practice case studies of successful applications articles describing datasets with applied value and perspective papers summarizing a body of paleontological research with relevance to the resource management community Topics can include but are not limited to Responses of species communities and ecosystems to perturbations Strategies to achieve the direct integration of paleobiology and paleoecology into on ground resource management Identifying baselines and reference conditions Increasing the robustness of forecasting models through the incorporation of paleontological data Identifying key species interactions and other phenomena as indicators of impending change New methodologies analytical tools and or proxies in the application of paleontological data to conservation and restoration practice Lynn Wingard Damien Fordham and Greg Dietl have no conflicts of interest Chris Schneider has a potential conflict of interest where manuscripts pertain to stakeholders in the petroleum industry as she is an independent contractor in the Alberta Oil Sands mining area
