Self Managed Learning and the New Educational Paradigm Ian Cunningham, 2020-09-17
Self Managed Learning and the New Educational Paradigm proposes revolutionary change to the educational system. The overwhelming research evidence is that the sum total of educational and training input accounts typically for only 10-20% of what makes a person an effective human being. Balancing theory, evidence, and practice, this ground-breaking book demonstrates that current structures in education are ill-equipped to support a learning-based approach. It establishes the case that learning as a core human activity is too important to be left to schools and other educational institutions. The book goes beyond just a critique of current practice in showing how a New Educational Paradigm can work. Self Managed Learning College for 9-17 year olds has no classrooms, no lessons, no imposed timetable, and no imposed curriculum. This is a place where students can learn whatever they want in any way they want and whenever they want. And it works, as evidenced by the lives of former students and from academic research. Dr Ian Cunningham, its founder, draws also on his extensive work in using Self Managed Learning in many of the world's largest organisations to show how this new paradigm can be put into practice. The book blends the unequivocal research evidence that we need a New Educational Paradigm with a real-life demonstration of what it could look like. It should be essential reading for anyone wanting to see how a new approach to education can be achieved.

Praise, Motivation and the Child Gill Robins, 2012-07-26
Anyone who spends time with children knows that praise works. It is a powerful motivator. Praising children for good behaviour or good work builds self-esteem and self-confidence. Children love to collect stickers, certificates, and rewards, so what better way is there to shape behaviour, encourage good work habits, and produce confident learners? Teachers and parents alike know that praise is effective; we use it every day and we see the positive effect that it has on our children. However, constructivist practitioners would argue that praise in any form creates

hierarchies and competition in the classroom has little effect on genuine learning and is invasively judgemental rather than supportive Constructivists would further argue that self esteem cannot be built by external agency teachers and parents can only create an appropriate environment in which a robust sense of self can grow and develop This book challenges traditional embedded thinking about the role of praise It questions the assumptions we make about developing self esteem about the ability of children to form their own independent judgements and the choices that children make regardless rather than because of contingent praise What happens when children are praised Read this book listen to what children really think and challenge your own assumptions Features include Case studies and children s work samples Points for reflection which could be used for CPD sessions Appendices containing behaviour policy samples Pupil teacher and parental perspectives This book is aimed at practising and training Primary school teachers It would also be suitable for NQTs who are starting to shape their own practice experienced teachers who want to develop and question their own practice and students on BA Hons and PGCE courses
