Every such  $A_{p_\omega}$  lies between the Hardy space  $H_p$  and every classical weighted Bergman space  $A_{p_\alpha}$ . Even if it is well known that  $H_p$  is the limit of  $A_{p_\alpha}$  as  $\alpha \rightarrow 1$  in many respects it is shown that  $A_{p_\omega}$  lies closer to  $H_p$  than any  $A_{p_\alpha}$  and that several finer function theoretic properties of  $A_{p_\alpha}$  do not carry over to  $A_{p_\omega}$ .

**But Will It Fly?** Iver P. Cooper, 2025-09-17 Conventional aircraft today are propelled by the action of propellers or jets and powered by the internal combustion of petroleum fuels in piston, turboprop or jet engines. But other power sources, powerplants and propulsion devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries. The power sources considered include human muscles, steam, batteries, nuclear reactors and hydrogen fuel, and the propulsion devices include sails, oars, flapping wings, rockets and cycloidal propellers. This meticulously researched book presents the history of these unconventional aerial power and propulsion systems, explains the underlying science and technology behind them and assesses the crucial question of practicality.

**Ploughshares and Swords** Jayita Sarkar, 2022-07-15 India's nuclear program is often misunderstood as an inward-looking endeavor of secretive technocrats. In Ploughshares and Swords, Jayita Sarkar challenges this received wisdom, narrating a global story of India's nuclear program during its first forty years. The book foregrounds the program's civilian and military features by probing its close relationship with the space program. Through nuclear and space technologies, India's leaders served the technopolitical aims of economic modernity and the geopolitical goals of deterring adversaries. The politically savvy, transnationally connected scientists and engineers who steered the program obtained technologies, materials and information through a variety of state and nonstate actors from Europe and North America, including both superpowers. They thus maneuvered around Cold War politics and the choke points of the nonproliferation regime. Hyperdiversification increased choices for the leaders of the nuclear program but reduced democratic accountability at home. The nuclear program became a consensus
