Design for Control of Projectile Flight Characteristics United States. Army Materiel Command,1966 This handbook presents a general survey of the principal factors affecting the flight of projectiles and describes the methods commonly used for predicting and influencing the flight performance The coefficients which characterize the aerodynamic forces and moments of a moving body are identified methods for determining the coefficients applicable to a projectile having a given shape and center of gravity location are described and the coefficients of a number of projectiles and projectile shapes are given The use of aerodynamic coefficients in predicting stability range and accuracy is described The effects of variations in projectile shape and center of gravity location on range accuracy and lethality are discussed Some material on prototype testing and the effects of round to round variations in production lots is presented **Reactor Handbook: pt.
