The Continuum of Stroke Care Joanne V. Hickey, Sarah Livesay, 2015-03-25 The Continuum of Stroke Care An Interprofessional Approach to Evidence Based Care will address the clinical care of stroke patients across the continuum of care from primary prevention of stroke the acute and subacute treatment of stroke syndromes through rehabilitation and reintegration into the community Each chapter will review current evidence based practice guiding clinical stroke care The book will address the American Stroke Association s Stroke Chain of Survival addressing prehospital care of the stroke patient and the development of stroke systems of care to provide all people in the United States access to acute stroke care Additionally the book will cover the current role of state legislation in stroke care and the evolution of hospital stroke certification The book will serve as a clinical resource providing detailed comprehensive medical and nursing care of all stroke subtypes while also addressing the system of stroke care in which medical nursing and interprofessional care provided

As such the book will serve as a clinical resource to medical and nursing caregivers providing direct patient care as well as stroke coordinators program directors and other hospital administrators developing stroke programs The book will also be a clinical resource for stroke interprofessional team members such as physical therapists occupational therapists Stroke care is most successful at improving patient outcomes when delivered by an interdisciplinary team Each chapter will address the critical role of the interprofessional team and highlight comprehensive care of the stroke patient rather than focusing only on nursing care Books published to date focus solely on the medical or nursing care of the stroke patient without attention to the stroke system of care and the role of the multidisciplinary team in improving stroke outcomes Additionally each chapter will highlight ongoing research trials and opportunities with the recognition that the scientific foundation for acute stroke care is rapidly evolving

Physicianship and the Rebirth of Medical Education J. Donald Boudreau, Eric Cassell, Abraham Fuks, 2018-02-26 The renewal of medical curricula generally arises from emerging pedagogies e g problem based learning new technologies e g high fidelity simulation or prevailing sociocultural forces e g complexity of health care delivery and team based care Approximately 15 years ago a team of physicians and administrators sought to take this further by considering the very nature of medical practice and the patient physician relationship that is the context and conduit of caring and care they restructured the composition and function of medical education This book Physicianship and the Rebirth of Medical Education is the authoritative publication on the philosophy design and implementation of this new curriculum From first year to graduation this book reimagines the education of medical students in its entire scope It discusses the epistemology of clinical practice and pedagogical methods and addresses pragmatic issues of curricular implementation The educational blueprint presented in the book rests on a new definition of sickness one focused on impairments of function as the primary issue of concern for both patients and their care givers This perspective avoids the common shift of medical attention from persons to diseases and thus provides the basis for an authentic and robust patient centered mindset The title of the book refers to a rebirth This implies that there was a previous birth Indeed the critical ingredients of medical education were articulated historically and many features emanate from a time honored apprenticeship model This book recognizes in William Osler and his natural method of teaching the subject of medicine the foundational elements for teaching physicianship The practice of medicine is indelibly relational and in turn medical education is an intellectual and an emotional journey that is rooted in clinical relationships As this book shows medicine must unfold in the context of patient care patients not diseases should be the center of attention

Geriatric Medicine Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older

adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine
