

# The Physician Report Card

*"And then the documentation is gone, and all that's left is a set of numbers." Pamela P. Bensen MD, Physician Documentation Educator*

## Public Reporting

Several agencies profile hospital and physician performance and make the information available to the public. These agencies use the data hospitals provide to Medicare on the UB-04 (Uniform Billing form) to determine severity of illness, risk of mortality, mortality index and complication rates. What the provider documents as the patient's diagnoses and treatment are "translated" by professional coders into ICD-9-CM diagnosis and procedure codes (International Classification of Diseases, Ninth Revision, Clinical Modification). These codes are maintained by the National Center for Health Statistics (NCHS) and Centers for Medicare and Medicaid Services (CMS) to determine hospital utilization, reimbursement and mortality data. All ICD-9-CM codes have established Severity of Illness (SOI) and Risk of Mortality (ROM) scores based on four levels:

- 1 Minor
- 2 Moderate
- 3 Major
- 4 Extreme

Once all diagnoses and procedures are coded, a complicated algorithm is used to determine the Diagnosis-Related Group (DRG) SOI/ROM score for that patient. Basically it takes two or more co-morbidities to impact the DRG SOI/ROM score. CMS uses these scores to determine the average SOI and ROM for the patients of a hospital or physician. It determines the Mortality Index, based on risk adjustment, to determine the ratio of actual deaths to expected deaths.

DRGs have a geometric length of stay which can be compared to the actual length of stay. Higher SOI/ROM scores support medical necessity for admission and longer length of stays. Each DRG has a relative weight which reflects average hospital resources used to treat the patient and establishes reimbursement. CMS is able to compare actual costs to expected costs. Relative weights are also used to determine the Case Mix Index which is another way to reflect how sick your patients are. This data is used to profile both the hospital and the physician. Some of the better known agencies to profile hospitals are noted below:

- Thomson Reuters: [www.100tophospitals.com/](http://www.100tophospitals.com/)
- Health Grades: [www.healthgrades.com](http://www.healthgrades.com)

## The Gap between Medical Terminology and Coding Language

Although coding language is based on medical terminology, they are not equivalent. Certified Professional Coders (CPC) must follow strict rules and code exactly what the physician says. They are not allowed to make assumptions. The table below shows examples of how physician documentation reflects the SOI/ROM in the coding world.
