

Converging and Diverging Action of Lenses

As convex lens converges all the light rays, coming parallel to its principal axis at a point, it is also called converging lens. Concave lens diverges all the light rays coming parallel to its principal axis. So, it is also called diverging lens.

The converging and diverging action of lens can be explained by considering a lens made up of large number of different small angle prisms. In a convex lens, the base of prism is towards principal axis and in concave lens, base of prism is away from the principal axis.
